INTRODUCTION.

IFTY-TWO years ago the FRUITLAND NURSERIES issued its first catalog, and began with twenty acres planted in nursery stock. This has now evolved into the largest commercial nursery in the middle South, and where a larger line of products are grown than in any other similar Southern establishment.

The several branches of our Nursery are divided into departments, each of which is in charge of a competent foreman, and special care is, therefore, secured in its management.

THE FRUITLAND NURSERIES are located west of and adjoining the limits of the City of Augusta, on the Washington road (a continuation of Broad street), and 1½ miles from the terminus of the Lake View Electric Car Line. In the home tract of 400 acres are soils of every texture found in this section of the State, thus enabling us to produce trees and plants under the most favorable conditions. In addition to the above area, we have leased for a term of years a 240-acre farm 10 miles from the home tract. A large portion of this new land is now planted in nursery stock.

We have no connection whatever with any other nursery; do not employ agents, and, therefore, deal directly with our customers.

THE NURSERY DEPARMENT is divided as follows: Roses, 15 acres; Fruit Trees, 300 acres; Grape-vines, 5 acres; Evergreen and Deciduous Trees and Shrubs, 100 acres; Small Fruits, 10 acres; Orchard and Test Grounds, 30 acres.

THE GREENHOUSE AND PLANT DEPARTMENT now includes over 60,000 square feet of glass. All modern improved appliances tending to economy in labor and healthy products have been added, and in addition to the plant-houses an area of 30,000 feet of coldframes allows us to safely carry through the winter an immense stock of plants, which in our mild climate do not require artificial heat.

We may, therefore, claim that our stock of trees and plants, in point of quality, variety and perfect adaptability to the southern climate and to southern fruit-growers, together with healthy growth and large size, is equal to that of any similar establishment in the United States.

LANDSCAPE AND ENGINEERING DEPARTMENT. In this Department is handled all questions that may arise with our patrons as to the improvement of private estates, city lots, public grounds, parks, cemeteries, etc., topographical surveys are made, grading and planting plans furnished and consultation given on such subjects as tree moving, planting, pruning and trimming, preparation of soil for special purposes, road, driveway and walk building, drainage and sewerage disposal.

Our charges for services are as moderate as is consistant with good work and results, and all work entrusted to us is carefully executed by experienced men under direct supervision of the firm.

It is a pleasure to us to answer inquiries from our patrons concerning the improvement of their grounds. For further information as to the work of this Department, refer to Page 16.

OUR FOREIGN TRADE reaches such distant points as Australia, China, Japan, Africa, the East and West Indies, Brazil, the Bermudas and every section of Europe and North and South America.

PRICES—It is not our object to grow or offer cheap stock, such as is so often palmed off on the public. Within the past few years the cost of production has increased materially, until in many cases it has fully doubled. The market price of stock in many instances is equalled by the cost of production, owing to the rapid advance in the price of labor and materials; therefore, when quality of products is considered, our prices will be found as low as those of any first-class nursery.

CATALOG will be mailed free on application. This Descriptive Catalog of Fruit Trees, Grapevines, Evergreens, Roses, Flowering Shrubs, Palms, etc., is issued annually in August.

P. J. BERCKMANS COMPANY, (Incorporated),

SUGGESTIONS.

ALWAYS address all communications to P. J. BERCKMANS COMPANY, Drawer 1070, Augusta, Ga., and NOT to individuals.

NOTE

ALL QUOTATIONS ARE FOR IMMEDIATE ACCEPTANCE, SUBJECT TO STOCK BEING SOLD. NO LIABILITY TO ATTACH TO US WHERE FROST, DROUGHT OR OTHER CASUALTIES BEYOND OUR CONTROL PREVENT DELIVERY OF STOCK THAT MAY BE CONTRACTED FOR.

ORDER EARLY, as orders are filled in rotation. Do not wait until the ground is ready to plant before sending in your order.

NAME AND ADDRESS—Always write your name plainly upon order sheet in Catalog. A lady should always sign herself Miss or Mrs., and always use the same name.

Give your postoffice, county and state, also street or postoffice box number, and the name of your nearest express office.

EXPRESS—In all cases when possible we advise our customers to have their goods forwarded by express. Plants, trees, etc., are now taken by the leading express companies at a reduction of 20% from the regular merchandise rate.

SHIPPING DIRECTIONS—Give plain and explicit directions for shipping. If by freight, state route. When no directions are given we shall use our best judgment in forwarding; but in all cases shipments are at purchaser's risk after receipt is taken from the transportation company. Freight and express rates will be given on application. (No shipments made at the 3 cents per pound valuation unless we are so instructed by our customers. The 3 cents per pound valuation carries a lower rate of freight than when shipments are made without this valuation clause.)

PACKING—We have every appliance for packing in the best possible manner. A large force

of thoroughly trained men are entrusted with this labor.

A charge of 25 cents to 50 cents for packing is made on all orders under \$5.00; over this amount packing is free, except on export orders. As these require large quantities of moss and extra labor, the packing charges are from \$2.00 to \$5.00, according to size of case.

TERMS OF PAYMENT—Cash with order or satisfactory reference before shipment; or 1f preferred will ship goods with Bill of Lading attached to Sight Draft, through express or bank. On all C. O. D. orders we require 25% of the bill remitted before shipment.

REMITTANCES—Remittances should be made by Postoffice or Express Money Orders, or by checks on Augusta or New York. As our banks charge exchange on checks on all points except Augusta and New York, please add $\frac{1}{4}$ of 1% on private checks. We cannot be held responsible for losses when remittances are not made as directed above. Cash sent through the mails is at sender's risk. MAKE ALL REMITTANCES PAYABLE TO P. J. BERCKMANS COMPANY.

WE GUARANTEE every tree or plant to be in a perfectly healthy condition, up to grade and first-class in every respect when leaving our hands, but after delivering to forwarders all losses resulting from delays or exposures in transit are at risk of purchaser.

TREES AND PLANTS IN LARGE QUANTITIES—Prices given for these on application. Orders for 100 or 1,000 trees in the aggregate, but comprising several classes, are billed as follows: 40 trees of a class, at 100 rate; less than 40, at 10 rate; 400, at 1,000 rate.

RESERVING ORDERS—When purchasers desire these to be reserved for weeks or months after the opening of the shipping season, they must be paid for in full at the time of ordering.

ERRORS—We exercise the utmost care in filling orders, and always put in more than is ordered, but during the rush of the busy season, an error is occasionally made, and satisfactory correction will be promptly made upon notification. Keep a copy of your order for comparison. All claims for errors must be made within five days after receipt of goods, otherwise they will not be entertained.

CLUB ORDERS—Special rates given on application.

RESPONSIBILITY—We have no connection whatever with any other nursery, and our responsibility extends only to persons purchasing direct from us. We also disclaim any responsibility for failure arising from defective planting, or from subsequent faulty treatment or cultivation, and we are not in any respect responsible for any loss or damage arising from any failure therefrom. While we exercise the greatest care to have all of our trees and plants true to name, well grown, and packed in the best possible manner, and hold ourselves in readiness to replace all trees and plants that may accidentally prove untrue to label, free of charge, or refund the amount paid therefor, it is mutually understood and agreed between the purchaser and ourselves that our guarantee of genuineness shall not in any case make us liable for any sum greater than that originally received for such trees or plants that prove untrue.

SHIPPING FACILITIES—Augusta being the terminal point of seven lines of railroad, and two lines of steamers upon the Savannah river, enables us to secure low rates of freight to all points.

SHIPPING SEASON—This usually commences about the middle of October or so soon as the plants are sufficiently dormant to lift with safety, and for all open-ground trees and plants continues until the middle of March, or until the buds begin to swell. Pot-grown plants can be safely sent out any time of the year.

INSECTS AND DISEASES—Our nurseries are free from these. Certificates of State Entomologist is attached to every shipment.

FUMIGATION—We fumigate our stock with hydrocyanic acid gas before shipping, as required by State law, so that assurance of freedom from insects or diseases of any kind is made doubly sure.

NUMBER OF TREES OR PLANTS ON AN ACRE AT GIVEN DISTANCES APART.

Hints for Planters

PREPARATION OF THE SOIL—The most desirable soil for fruit trees is a rich loam, naturally dry or made so by drainage. Before planting, prepare the land by thoroughly plowing and subsoiling, first using a 2-horse plow, followed by a subsoil plow. Lay off the rows at required distances, and dig holes at least two feet wide and two feet deep; fill the holes by breaking in the sides, commencing at the bottom and going upward. Use surface soil in filling up, and with this mix a shovelful or two of cotton seed and stable manure compost, well decomposed, or about 1 pound of bone meal. Avoid the contact of the roots with heating manure.

SELECTION OF TREES—For this climate experience has taught us that one and two-year-old trees of thrifty growth are the most desirable. Purchasers should bear in mind that such trees can be removed from the nursery with all their roots, whereas a 4 or 5-year-old tree cannot be taken up without cutting away a large portion of them. Success in transplanting is increased according as attention is paid in selecting well-rooted trees, instead of heavily-branched ones. Give as many sound roots, and as little head to a tree as possible.

PREPARATION OF TREES—Before planting remove the broken roots, cut back one-year peach, apple and plum trees to a naked stem 1½ to 2½ feet high, leaving no side branches. Two-year-old trees should have their branches cut back to half their length, or less; the lower limbs less than those above, cutting in shorter as you go upward, leaving the leader the longest. (For pruning peach trees, see Page 8.) Plant about 2 inches deeper than the tree originally stood in the nursery row.

TIME FOR PLANTING—In this climate, vegetation, although inactive in winter for the formation of leaves and new wood, is never so as to new roots. A tree transplanted in November or December will by the ensuing spring have formed sufficient new roots to give it a firm hold in the ground, and will grow off rapidly when active vegetation commences. Plant as early after the first killing frost as practicable. Do not delay it until the spring months. Apple trees can be transplanted here as late as March, and in some seasons the first of April, but success is increased if the planting has been done in the fall or early winter.

AFTER-CULTURE—FOR GARDENS: Keep the soil free from grass and weeds, and stir frequently during the summer. Remove all suckers and branches which start below the head of the tree. Mulching is advisable for trees planted late in the spring.

For ORCHARDS: Drill in cow-peas in May or June or keep the ground planted in cotton, vegetables or melons. Leave at least 4 feet between trees and crop. Cultivate frequently until middle of August. Do not plant corn or small grain crops in your orchard if soil is of light character, but for stiff soils devoid of vegetable matter, sow rye, scarlet clover or barley in fall, using a suitable commercial fertilizer; turn under in spring and drill in peas as above directed. If devoid of lime or potash, supply the deficiency by a top dressing of bone meal, plaster or good commercial fertilizer.

To insure a healthy growth of fruit trees, the land should be kept well supplied with plant-food. Lands exhausted by years of cropping cannot return a crop of fruit unless the trees are well cultivated and regularly fertilized.

CARE OF TREES ON ARRIVAL—If not ready to plant on arrival, unpack without exposing the roots to cold or air, dig a trench, and heel-in by carefully covering the roots with earth, and give a copious watering. Trees thus treated can remain in the trenches until ready for their permanent places in the orchard. If frozen when received do not open the boxes, but place them in a cellar or some cool dark room that is free from frost, and let them remain until all frost is drawn out. If no cellar or frost-proof room, bury the box in saw dust or dirt until thawed. The point is to get the frost entirely out without sudden exposure of stock to heat, light or air. Even if frozen solid the stock will not be injured if handled in this manner.

Injurious Insects

The rapid increase of insects injurious to fruit and fruit trees necessarily compels the horticulturist to obtain a knowledge of their habits, that he may provide means to oppose their ravages; otherwise he must remain at their mercy, and find that paying crops become more and more uncertain. The limits of this catalog allow only space for the enumeration of the most destructive and abundant species which infest the orchards and vineyards, and the best remedies as suggested by leading entomologists. The following remedies are compiled from the latest recommendations of the most prominent entomologists and pathologists:

APPLES

APPLE WORM (Carpocausa pomonella), or COD-LING-MOTH. Spray with Paris Green at the rate of 6 ounces to 50 gallons of water, and Bordeaux mixture, after the blossoms have fallen, and before the calyx lobes close. Repeat in one week. It is generally conceded that earlier or later sprayings than mentioned above are of no value against the first brood, when dealing with the codling-moth. It is necessary, therefore, to spray just after the petals fall and before the calyx lobes close, in order to fill this cup with poison

at the only time it is possible to do so. A second brood of apple worms appear from the middle to the last of June, in Georgia—later farther north—and spraying for this brood is advisable in many cases. As a general rule, spray the last week in June, and again two weeks later, with Bordeaux-Paris Green mixture. Bordeaux not being strictly an insecticide, does not act against the codling-moth, but it is always well to use it with Paris Green to prevent apple scab or other fungous diseases.

BORER (Saperda candida). Examine trees in spring

BORER (Saperda candida). Examine trees in spring and again in June and dig out the grubs with a wire.

Then wash the collar of roots and parts of the body

with a mixture of lime and sulphur.

CATERPILLAR (Clisicampa Americana). Destroy
nests as soon as they appear in spring by burning, or
spray with Paris Green 8 ounces, lime 1 pound, water
50 gallons.

SPRING CANKER WORM (Paleacrita vernata). circle the tree with a canvas belt coated thoroughly with tar or train oil; or spray with 6 ounces Paris Green and 1 pound lime to 50 gallons Bordeaux or

WOULLY APHIS (Schizoneura lanigera). For above-ground colonies, wash trees with solution of whale-oil soap or kerosene emulsion. For root-inhabiting colonies, remove the soil to a depth of about 3 inches, or suffi-cient to partially expose the roots; open a circle from 4 to 8 feet in diameter, depending on the spread of the roots, distribute three to eight pounds of tobacco dust or use 15 per cent. kerosene emulston. Enough emulsion should be used to saturate the soil to a depth of 3 or 4 should be used to saturate the soil to a depth of 3 or 4 inches. Recent experiments have shown that kerosene emulsion may be used with success. Tobacco dust is of more value as a preventative and fertilizer. Badly infested trees should receive kerosene treatment.

PEACHES AND PLUMS

CURCULIO (Conotrachleus nenuphar). Spray the trees before the blossoms open, with a solution of arsenate of lead, 3 fbs.; lime, 2 fbs., to 50 gallons of water. Use Bordeaux with arsenate of lead when the blossoms have fallen; ten days later Bordeaux and arsenate of lead. If peach and plum trees are in foliage, use 3 fbs. copper sulphate, 9 fbs. lime and 50 gallons of water; a stronger mixture will burn the foliage. Then follow with a large hopper made of sheeting and having a spread of 10 to 15 feet, having a slit in same so that the tree can be encircled; give the trunk a quick blow with a padded club; this causes the curculio to fall. Dump the insects into a jar of kerosene. Jarring should be done daily, beginning at daylight and continuing until 8 or 9 o'clock. It will hardly pay to jar the trees at any other time. Continue the jarring until the orchard is rid of the insects.

PEACH TREE BORER (Sanninoidea exitiosa). The old method of worming peach trees during winter has been found ineffective, principally because the worms cause too much damage before being removed. A better method is the following:

Supposing that we start with an infested orchard, CURCULIO (Conotrachleus nenuphar). Spray the

Supposing that we start with an infested orchard, Supposing that we start with an infested orchard, first worm the trees in the spring; this will lessen the number of worms that will reach maturity. About July 1st apply a wash to a height of 18 to 20 inches, allowing it to go well down on the roots. Immediately afterward draw up the earth to the trees forming a cone 6 to 8 inches above the level. This will force the borermoths to deposit eggs up above the mound of earth. The wash previously applied will help to repel the moths. A second application of deterrent wash, during August, should be applied if the first wash gets thin; that is, keep the bark coated.

August, should be applied if the first wash gets thin; that is, keep the bark coated.

The following is an excellent wash for peach trees:
One bushel of quick-lime, 20 lbs. of sulphur, 1 gallon of coal-tar, 50 gallons of water. Mix tar and sulphur in 10 gallons of water in barrel, add lime, keep well stirred. When entirely slacked dilute to 50 gallons.
During the last of October remove the mound from around the trees, and thoroughly scrape and clean the bark. This will kill many young worms and probably some eggs. Now apply the wash again as it may kill many little borers that may be exposed but not actually

killed by the scraping process. Worm the trees in the spring for the few worms that may escape the treatment just suggested.

SAN JOSE SCALE (Aspidiotus perniciosus). This attacks peach, pear, apple, quince, cherry, raspberry, rose and a number of other trees and shrubs. For winter treatment we would recommend either lime-sulphur wash or lime-sulphur-salt wash. Experiments have shown that salt is not necessary, but is preferred by some people. Spray in December and again late in February or early March. For summer treatment would suggest spraying with kerosene emulsion, one part of emulsion to five of water, or use the regular strength of emulsion to five of water, or use the regular strength of emuls to the trucks and larger limbs only. None of this mixture should be put on the foliage or young growth.

OTHER SCALE INSECTS, of which there are several species, which are more or less destructive to fruit or other trees, can be eradicated by the use of kerosene emulsion, whale-oil soap or Larkin's Sulpho-Tobacco

(Note—If your trees are infected with any insects or fungous diseases, send infected portion to your Experiment Station, your State Entomologist or U. S. Entomologist at Washington, D. C.)

JAPANESE PERSIMMONS, WALNUTS AND PECANS

BORER (Prionus). These bore through the roots and usually destroy the tree; and must be carefully removed. Carefully examine collar of tree in winter and midsummer, and apply lime and sulphur wash.

CATERPILLAR (Catocala maestosa). This insect feeds on the leaves of pecans, and is sometimes quite injurious; spray with Paris Green, 4 ounces, lime 1 pound to 50 gallons of water.

PECAN BUD WORM (Proteopteryx Deludana). Spray the trees just as the buds are opening, with arsenate of lead, 3 pounds to 50 gallons of water, and repeat application 10 days later. If the worms appear again in June or July, repeat the same treatment. This will also help control the pecan case bearer.

TWIG GIRDLERS (Oncideres cingulatus). All limbs that have been girdled and have fallen must be burned at once, thus destroying all future broods of sawyers.

sawvers.

GRAPE-VINES

BORER (Prionus). Its presence is manifested by the unhealthy appearance of the vine. Search must be made at the roots and the grub destroyed. FLEA BEETLE (Haltica Chalybea). Dust leaves

with dry lime.
GRAPE CURCULIO (Coeliodes inoequalis). Paris
Green or arsenate of lead solution as a spray, as soon

s fruit is set.

LEAF HOPPER (Erythroneura vitis). Passing with torch between the rows in the evening and shaking the vines to distrub the insects.

LEAF FOLDER (Desmia funeralis). Kerosene emul-

sion or Paris Green or arsenate of lead as a spray.

PHYLLOXERA. Various insecticides are recommended but must be applied below the ground with the aid of specially constructed apparatus.

STAWBERRIES

BEETLE (Haltica ignita). Dust leaves with dry lime.

Dangerous Fungous Diseases

APPLE TREE BLIGHT may be treated similarly as

APPLE TREE BLIGHT may be treated similarly as for pears, but fewer applications are required.

BLACK ROT IN GRAPES. Spray with copper sulphate solution in spring before buds swell. When leaves appear, spray with Bordeaux; repeat twice at intervals of 10 to 14 days. Dusting with flowers of sulphur as soon as fruit is set, and repeat every 10 days until coloring, is advisable for mildew, but if Bordeaux mixture is used early it will lessen the appearance of the latter. latter.

BLACK KNOT IN PLUMS. Cut off the affected

BLACK KNOT IN PLUMS. Cut off the affected branches below affected parts, and burn to prevent its spreading. Spray with Bordeaux mixture.

BROWN ROT ON PEACHES, PLUMS AND NECTARINES. Spray with Bordeaux mixture, containing 4 pounds copper sulphate, 6 pounds lime to 50 gallons of water, before the buds swell. When fruit is well set,

Bordeaux (3-9-50) Repeat this spraying at intervals of 10 to 14 days. Spraying may be continued until fruit begins to ripen. Even this reduced strength Bordeaux deaux may burn foliage during very wet seasons. Dusting with flowers of sulphur is advisable if Bordeaux mixture is not used, but the sulphur should be applied every 10 to 14 days. All mummified fruit and limbs showing brown rot must be removed and burned.

PEACH AND PLUM ROSETTE. Root up and burn the affected trees as soon as the disease is observed.

PEACH LEAF CURL (Exoascus deformans). Spray with Bordeaux (4-6-50) during late fall or at least one month before the fruit buds open; when trees are month before the fruit buds open; when thees are thoroughly covered only one application is necessary to prevent this disease. Recent experiments indicate that fall spraying will control leaf curl as well as early coving treatment, if trees are well-coated. If spraying

has not been done and the disease appears, continuous cultivation and the application of nitrogenous manures will throw off the diseased leaves and save the fruit crop. In case of San Jose scale in the same orchard the lime, salt and sulphur wash may be used effectively against both scale and leaf curl at one spraying.

PEAR BLIGHT. The following preventive measures are recommended: As buds are swelling spray with copper solution; as blossoms fall, Bordeaux mixture (3-9-50) and arsenites; 8 to 12 days later repeat application and use Bordeaux mixture 10 to 14 days later, and again 10 to 14 days later, if necessary. If blight has occurred, cut off and burn all affected limbs to prevent spreading. During winter, carefully remove all blighted twigs, and pay particular attention to removing all blight occurring in main limbs or branches. Send for bulletin on "Control of Pear Blight," which can be secured from the Bureau of Plant Industry, Washington, D. C., or from the State Board of Entomology, Atlanta, Ga. Disinfect the pruning shears.

RUST ON RASPBERRIES AND BLACKBERRIES. Spray with copper sulphate solution before buds break. Use Bordeaux mixture if rust appears in spring or summer.

FUNGICIDE AND INSECTICIDE SOLUTIONS AND FORMULAE

ARSENATE OF LEAD can be used as a substitute for Paris Green and London Purple. It can be used much stronger with less danger of injury to plants. Two pounds to 50 gallons of water will give good results against most biting insects.

BORDEAUX MIXTURE. Copper-sulphate, 4 pounds; quick lime, 6 pounds; water, 50 gallons. Dissolve the copper-sulphate by putting it in a bag and hanging it in a wooden or earthen vessel holding 25 gallons; slake the lime gradually and add water until you have 25 gallons. The blue-stone mixture and lime should then be poured into the pump so that the two streams will mix thoroughly as they fall. Bordeaux mixture will not keep more than 24 hours. Remember this.

COPPER-SULPHATE SOLUTION. Dissolve 1 pound of copper-sulphate in 15 gallons of water. Do not apply this solution to foliage; it must be used before buds break on grape vines and peach trees. For the latter, use 25 gallons of water.

KEROSENE EMULSION. One-half pound of soap dissolved in 1 gallon of water; add to this, while hot, 2 gallons of Kerosene. (The boiling soap solution should be removed from the fire before the kerosene is added). Churn violently with a spray pump or garden syringe until the mass becomes of the consistency of butter. Dilute the above mixture with from 9 to 15 parts of water when using, so that it will not be stronger than 1 part of oil to 9 to 15 of water. Sour milk may be used instead of soap.

LARKIN'S SULPHO-TOBACCO SOAP is an universal insecticide. A sure and safe exterminator of all kinds of insects and vermin on plants, shrubbery, vines, small fruits and trees. It also acts as a powerful ferilizer; plants that have witted from the ravages of insects will regain their freshness and grow luxuriantly. The soap is non-poisonous and absolutely safe to handle. It will not injure the tenderest growth.

It will not injure the tenderest growth.

LEMON OIL. We have found this an invaluable in-

secticide for all plants grown in greenhouse or in pots. Plants should be dipped in a solution of suitable strength. While it kills all scale insects, it is not injurious to the most tender plants.

LIME AND SULPHUR WASH. Lime, unslaked, 25 pounds; sulphur, ground, 20 pounds; water, to make 60 gallons. Place 8 to 10 gallons of water in an iron kettle over a fire, and when it reaches the boiling point add the sulphur and mix thoroughly, then add the lime, which will immediately produce a violent boiling. From time to time add a small quantity of water as needed to prevent boiling over or burning. The sulphur gradually goes into solution, and the mixture, at first thick and pasty, becomes thinner and thinner, changing in color through several shades of yellow. After boiling at least one and a half hours, the mixture should be diluted to the proper amount by the addition of sufficient hot water. If a suitable boiler is convenient, the mixture may be more economically cooked in barrels or tanks by the use of steam.

The Lime and Sulphur Wash is now generally recommended for controlling San Jose scale, and in some respects is superior to the other remedies named.

NAPTHA SOAP AND NICOTICIDE. One ounce of soap and one-quarter ounce of Nicoticide to each gallon of water. It is advisable to have the water at 100 degrees Fahrenheit. This is an excellent spray for Red Spider.

Spider.

PARIS GREEN. Actively poisonous. Add 4 ounces Paris Green, 1 pound fresh lime to 50 gallons of water. Paris Green and Bordeaux mixture may be applied together without the action of either being weakened.

POWDERS. With 50 pounds of land plaster mix one pint of crude carbolic acid. Sprinkle over vines for beetles and aphides.

PYRETHRUM. One ounce of the "Bubach" powder, add to 2 gallons of cold water, on any plant used for food, as this is non-poisonous.

SULPHUR, 1 pound; 1 pound of air-slaked lime, and boil it in 8 quarts of water until the concoction simmers down to about 6 quarts; add 1 gallon of this mixture to 50 gallons of water. Use as a spray for red spider every five to six days until the spider is eradicated.

TOBACCO, 1 pound; boiling water, 2 gallons; strain when cool. Very effective when used as a spray against flea beetles, lice aphides (plant lice).

WHITE HELLEBORE, 1 ounce; water, 3 gallons. Effective as a spray for rose slugs.

SPRAYING

We cannot be too emphatic in impressing on the horticulturist to spray his fruit trees and grape-vines if he desires good fruit. Follow directions carefully. Experiments frequently result disastrously. Careless spraying will result in loss of fruit and sometimes the trees. Every fruit-grower should purchase a spraying apparatus; they can now be had for a small sum. Be careful in keeping your solution continually stirred. The best time for spraying is late in the afternoon or during cloudy weather, except with kerosene emulsion; this should be used on bright sunshiny days. (We recommend the Gould Pumps. Write us for prices on these; we can save you money.)

SULPHO-TOBACCO SOAP

A WONDERFUL INSECT AND BUG EXTERMINATOR

KILLS Sulpho-Tobacco

Soap.

INSECTS

Gives best results in quickly exterminating all insect life on plants and flowers, in and out of doors. Effectively destroys squash and potato bugs, currant worms, lice, greenfly, mealy bug, red spider, etc. Unexcelled for spraying shrubs, fruit trees and vines. This popular insecticide never fails to give satisfaction. It is cheap, clean, harmless and noninjurious to the tenderest growth. You cannot afford to be without Sulpho-Tobacco Soap if you desire to be successful in plant culture. A trial will give highly gratifying

results. We have discontinued handling anything smaller than the 10-lb. size. 10-lb.

cake by express \$3.00

FRUIT DEPARTMENT

APPLES

Summer and early fall varieties of northern or European origin succeed equally as well as southern seedlings, but the latter are the only reliable varieties for late fall and winter. Northern winter varieties seldom retain their fruit well here after August, as it then decays and drops during that month.

Some native varieties that keep well when grown in the upper sections of Georgia, South Carolina, North Carolina and Alabama, fail to retain their keeping qualities when cultivated in the lower or middle sections of these states. The season of maturity is given for the latitude of Augusta.

For orchard and long-lived trees plant only standards, grown by either being budded or grafted upon whole seedling stocks. We do not propagate Apple trees by grafting upon pieces of roots. We have always advocated planting trees propagated on whole seedling stocks, and hold to the same practice now.

Clay or clay loam are the best lands for Apples. Plow well and deep before setting the trees. The land should be well drained.

should be well drained. PRICES OF TREES:-

100 1000 \$100.00 80.00

Distance for planting, 20 to 35 feet apart each way, according to soil.

SUMMER APPLES

Varieties for Market Orchards in Capitals.

STRACHAN RED. Large; yellow, nearly covered with crimson and fine bloom; juicy, crisp, acid; beautiful fruit. Ripens end of May and continues through June. Tree a thrifty and fine grower; ex-ASTRACHAN RED.

cellent and profitable.

COFFMAN. Medium large, roundish ob and splashed with red, white dots. oblate, striped ts. Flesh fine

and splashed with red, white dots. Flesh fine juicy, white, of good quality. An improvement on Red June. Tree upright grower. June.

CAROLINA WATSON. Very large; oblate, conical; green, striped with dull red, with a dull red cheek; sweet, crisp and perfumed. Beginning of July. Exceedingly prolific, and a good market fruit.

EARLY HARVEST. Medium to large; bright yellow; tender, juicy, well flavored. An excellent home market Apple. Invaluable in any orchard. June 5, and lasts two or three weeks.

EARLY RED MARGARET. (Southern Striped June). Small to medium, rather flat; skin yellow, with dark red stripes; subacid and of high flavor. June 20, and lasts until July 20.

FAMILY. Medium, conical; brown-red and narrow stripes; juicy and high-flavored. Middle of July, and keeps ripening for six weeks. Very productive. Gravenstein. Large; striped; juicy, subacid. June and July.

Hominy, or Sops of Wine. Medium; red; very juncy subacid. July.

HORSE (Haas, Summer Horse, Yellow, Red or Green Horse, etc.) Large; green; acid. Good for cooking and drying; known everywhere. July and Au-Very productive.

SIX-YEAR KANSAS QUEEN APPLE

KANSAS QUEEN. Large; yellow, nearly covered with crimson; good quality. Very reliable, productive, and a good market variety. Succeeds well on light sandy soils. June and August.

May Pippin. Small; yellow; good quality. Ripens first

RED JUNE. Medium, conical; deep red; juicy. Very productive. June 15 to end of July. Rhode's Orango. Large conical; red on orange ground, thickly dotted with russet; sugarv and of high aroma. July 15

aroma. July 15.

YELLOW TRANSPARENT.
quality. A production ELLOW TRANSPARENT. Medium; yellow; good quality. A productive and excellent variety, but trees are of a dwarfish habit. June.

AUTUMN APPLES

Varieties for Market Orchards in Capitals.

BONUM. Medium; deep crimson; firm, tender, juicv, mild, subacid. September to October.

CAROLINA GREENING (Southern Greening, Yellow or Green Crank, Southern Golden Pippin, Green Cheese). Medium green or yellow; crisp, subacid, fine favor. September to January. Compact grower and prolific.

EQUINETELEE (Bachelor, King, Iola, Ne Plus Ultra, Byers, Buckingham, Kentucky Queen). Very large, oblate; yellow with bright red cheek and crimson stripes; flesh, yellow, subacid, very rich and juicy; a magnificent fruit. Ripe end of September and lasts until November. Tree compact and a vigorous grower; bears young.

FALL PIPPIN. Large, green, subacid; quality best. August and September.
Grimes' Golden. Medium, round, oblate; skin yellow, with small dots; flesh yellow, crisp; rich, subacid; very good. October to December.

HARGROVE. Origin, Haywood county, N. C.; above medium to large, oblate, golden yellow, with a bright carmine cheek; flesh crisp, white, with Pearmain flavor; subacid; quality best. Maturity, October and November. The Hargrove possesses such exceptional merits that we believe in offering it a yaluable addition is made to our best fall Apples.

HAYWOOD. A seedling of Hoover; yellow and dark crimson cheek; flesh white, subacid; good quality. Maturity October. Compact growth.

MkS. BRYAN. Origin, Walker county, Georgia. Very large, orange-red; quality best. Maturity September and October. An exceedingly handsome fruit, and becoming very popular in many sections.

yellow; crisp, sugary, good flavor. August and September. A very showy fruit. Tree spreading, vigorous and productive. One of the best varieties for the Piedmont section of Georgia, South Carolina and PINE STUMP. North Carolina.

WALLACE HOWARD. Very large, conical; deep or-ange-red, with a few crimson stripes; flesh brittle, sugary and highly flavored; quality best. Maturity, Very showy fruit

WINTER APPLES

Varieties for Market Orchards in Capitals.

BLACK WARRIOR. Above medium; green; quality best; a fine keeper and a first-class fruit in every respect; prolific. October to March.

BEN DAVIS (N. Y. Pippin, and Thornton of Southern Alabama). Medium, oblate, greenish yellow, with a crimson cheek; subacid; fair quality; keeps remarkably well.

WINTER APPLES-Continued.

Bismarck. From New Zealand; has been fully tested in Europe and in the United States. Enormously productive, and bears very young; quality very good. Late fall and winter. Tree of dwarf habit, and is largely grown in pots for decorative purposes. Has fruited with us.

Horn. (N. C. Vandevere). Medium; flat or conical; here and further south dark crimson; further north green, with red cheek; juicy, rich. Ripens in November and keeps until March; tree an open grower;

Mangum (Carter, Gully.) Medium; red striped; flesh firm, juicy and well flavored. Ripens in October, and keeps well; productive; tree a vigorous, com-

pact grower.

ragon. A Tennessee seedling, combining the good qualities of Winesap and Limbertwig. A good keeper. Paragon.

qualities of Winesap and Limbertwig. A good keeper.

POORHOUSE (synonyms, Winter Green and Winter Queen.) Large, roundish oblate; pale yellowish green, russet spots; flesh yellowish, moderately juicy, mild, subacid; very good. Tree vigorous, compact grower. This is a valuable addition to our varieties, as it is an exceptionally good shipper and keeper. Ripens last of October.

RED LIMBERTWIG. Medium; dull, rusty red; flesh yellow, firm, subacid; very good; tree thrifty; but

open grower.

ROMANITE. Fruit similar to Shockley; tree of a more open growth; branches slender and very distinct in foliage and in appearance; possesses all the bearing and keeping qualities of the Shockley.

ROME BEAUTY. Large; yellow and bright red; handsome, medium quality. Moderate grower, good bearer. October to April.

ROYAL LIMBERTWIG. Large, oblate; pale yellow, striped red; fiesh yellow, rich, juicy.

SHOCKLEY (Waddell, Hall, Sweet Romanite). Medium, conical, always regular; yellow, with a bright crimson cheek; flesh firm, sweet or subacid, with some flavor. Tree very erect, vigorous, exceedingly productive. Ripens in October, and will keep until the following summer. This Apple cannot be classed as of first quality, but is yet the most popular winter variety we cultivate. Profitable market variety.

STEVENSON'S. Medium to large; green, covered with brown; flesh firm, juicy and spicy. A regular bearer, and keeps until April. The tree is a fine grower.

and keeps until April. The tree is a nne grower.

TERRY. Medium; subacid; quality best. November to
January. Resembles Pryor's Red.

WINESAP. Small to medium; red; vinous, quality very
good. A good keeping Apple. YATES (Red Warrior). Small; dark red, dotted with small white dots; flesh yellow, firm, juicy and very aromatic. Immense bearer and good keeper.

YORK IMPERIAL or JOHNSON'S FINE WINTER.
Medium; whitish, shaded crimson; flesh yellow, crisp,
juicy, subacid, very good. October to January. A
profitable market variety for the upper sections.

(Note—Nearly all Winter Apples commence to be in eating condition here in October, and if properly taken care of in a cool, dry room, free from frost, the larger number can be kept through the winter.)

CRAB APPLES

HEWES' VIRGINIA CRAB. Small; dark red; regular and profuse bearer; valuable for cider. October to March.

March.
Siborian Crabs. These produce an abundance of small fruit much esteemed for preserving. Trees are also very ornamental. The best varieties are Golden Beauty, Red and Transcendent.

APRICOTS

PRICE OF TREES:—
4 to 5 feet, branched..... Per 100 Each Par 10 \$17.50 \$0.25 \$2.00

Apricots are best adapted for planting in city gardens, or where trees are protected by surrounding buildings. They are among the most delicious of fruits, and, therefore, a little extra care should be given in protecting the filowers from the late spring frosts. The trees, when planted in orchards, seldom last long here, unless protected by surrounding timber or tall-growing fruit trees, but in many sections of the southwest this is one of the most desirable of orchard fruits. The period of maturity extends from the beginning of June to the end of July. The best varieties are as follows:

EARLY GCLDEN (DuBois.) Fruit small, rounded oval;

skin smooth, pale orange, moderately juicy and sweet; very good flavor.

MOORPARK. (Dunmore, Temple's, deNancy, etc.)
Fruit large; skin orange, brownish-red on sunny side; flesh bright orange; freestone, juicy, rich and ous flavor

ROMAN. (Transparent, Grosse Germine, etc.) Fruit

medium sized; skin pale yellow, sometimes dotted with a few red spots; flesh dull yellow, soft, rather dry; one of the largest growing and hardiest apricot

ROYAL Fruit medium, oval, dull yellow, red on sunny side: flesh pale orange, fine flavor. ST. AMBROSE. Large, early; skin deep yellow; flesh

sugary and juicy.

CHERRIES

All grafted or budded upon Mahaleb stock, which is the most desirable for this section. The Cherry is uncertain in this latitude and still more unreliable further south, but in the upper sections it succeeds well.

DUKE AND MORELLO CHERRIES

Per 10 \$2.50 2.00 Per 100 \$20.00 17.50 PRICE OF TREES:-Two-year, 4 to 5 feet, branched...... One and two-year, 3 to 4 feet, branched..... \$0.35

DYEHOUSE. A very early and popular variety. Ripens one week earlier than Early Richmond. EARLY RICHMOND. Deep red. A very valuable variety.

LATE DUKE. Large; light red. Late.
MAY DUKE. Dark red. A very popular sort. Early.
OLIVET. Large; red; subacid.
ROYAL DUKE. Dark red.

HEART AND BIGARREAU CHERRIES

Per 100 \$20.00 PRICE OF TREES:-Per 10 \$2.50 \$0.35

BLACK TARTARIAN. Very large; black. GOVERNOR WOOD. Large; yellow and red. LUELLING. Very large; black. Very fine.

WINDSOR. Large; liver-colored. Fine late variety. WERDER'S EARLY BLACK. Large; black. Early. YELLOW SPANISH. Large; early; has a red cheek; juicy. One of the best.

BROWN TURKEY FIG

FIGS

PRICE OF TR			Each 10

Best Varieties for General Cultivation in Capitals.

BRUNSWICK, or MADONNA. Very large; violet; good

and productive.

BLACK ISCHIA. Medium; blue-black; good. Bears

BLACK ISCHIA. Medium; blue-black; good. Bears abundant crops, and is hardy.
BROWN TURKEY. Medium; brown; sweet and excellent; very prolific. Most reliable for field culture.
CELLESTIAL. Small; pale violet, with bloom; very sweet; prolific and hardy.
Genoa. Medium; yellow.
GREEN ISCHIA. Green, crimson pulp; prolific.
LEMON. Large; yellow; sweet.
Madeline. Small; pale yellow.
White Marseilles) Varieties recommended for drying.
White Nerii.......) Both produce large fruit.

NECTARINES

PRICE OF TREES:-10 Each 100 1-year, 4 to 5 feet......\$0.25 \$2.00 \$15.00

Require the same culture as the peach. The fruit, having a smooth skin, is very liable to the attacks of the curculio and brown rot, and must be sprayed as soon as blossoms fall, and again every two weeks during May and June. They ripen through July and part of August.

COOSA. Fruit large, red; flesh white; origin North

Georgia.

EARLY VIOLET. White with blush cheek; flesh tender, juicy and of good flavor.

ELRUGE. Red; mottled darker.

NEW WHITE. Large; pure white; flesh tender, juicy, vinous; very good; early; free.

VICTORIA. Medium; purple, with brown cheek. July.

PEACHES

PRICE OF TREES:-	Each.	Per 10	Per 100	Per 1000

One year, 3 to 4 feet, stocky	.10	1.00	8.00	60.00

Varieties for Commercial Orchards in Capitals.

All of our Peach Trees are propagated from buds taken from the best bearing trees. We, therefore, know our trees to be true to name, perfectly healthy, free from disease and first-class in every respect. We do not grow cheap and inferior Peach Trees.

DIRECTIONS FOR CULTIVATING THE PEACH—A sandy loam is best suited to the Peach, but it will adapt itself to almost any soil, provided it is well drained. Plant one-year-old trees, 18x18 feet; cut the trees back to 18 to 24 inches, as it is always best to have a low-headed tree. In the spring, after the growth has started, remove all but three branches and let these be distributed so that the tree will be well balanced. For the first two years fertilize with well-decomposed barnyard manure, or a mixture of one part of cottonseed or bone meal to two parts of acid phosphate. Apply 1½ to 2 pounds to each tree. After the third year avoid nitrogenous fertilizers and use a fertilizer containing a good percentage of bone phosphate and potash. Prune every year by cutting off one-third of the previous year's growth. The head of the tree should be broad and open so as to allow free circulation of light and air. Never plant newly cleared woodlands; such lands should be cultivated for at least two years before setting the trees, often well injure them. In preparing orchard land, plow deep. If necessary, subsoil. Cow-peas drilled in 2 feet apart, leaving at least 4 feet on each side of the trees, is the best crop to grow in a Peach orchard. Cultivate frequently, and in February or March turn under the cow-peas. When the orchard begins to bear it should have clean cultivation. After the fruit is harvested, drill in peas for a cover crop.

FREESTONES

Alexander. Above medium; highly colored in clay soils, less so in light soils; flesh greenish white, very juicy, vinous and of good quality; adheres to the stone. Matures from May 20 to June 15 at Augusta. Trees are remarkably prolific and bear very young. Angel. (For Florida and Sub-Tropical sections only.) Large; roundish, slightly pointed; skin yellow, highly wasned with red; flesh white, juicy, fine flavor; seedling of Peen-to; freestone; ripens in north Florida, June 20th.

BELLE (Belle of Georgia). Very large; skin white, with red cheek; flesh white, firm and of excellent flavor. Tree a rapid grower; very prolific; fine shipper. Ripe July 5 to 20.

BERENICE (China strain.) Large to very large; yel-

low, mottled with dark crimson; flesh yellow, melting, juicy and rich. End of July to middle of August. In point of excellent qualities it is superior to any yellow Peach of its season, is most showy and an excellent shipper; its good quality also commends it to the planter. It originated with the late Dr. L. E. Berckmans, in 1877, and after 30 years' trial we have nothing equal to it at the same season.

CARMAN. Large, creamy white, with deep blush; skin very tough, but flesh very tender and of fine flavor, juicy; prolific bearer. A most profitable and popular shipping variety. Ripe June 20 to July 1.

Chair's Choice. Large; yellow; flesh very fine; heavy bearer; an excellent variety; August 15th to 30th. Climax. (For Florida and Sub-Tropical sections only.) A seedling of Honey, but larger; a heavy bearer; fruit of good appearance, round, slightly oblong,

FREESTONE PEACHES-Continued.

point re-curved; pale yellow, washed red; flesh yellowish white, fine grain, sweet. Ripens north Florida, June 25th to July 5th.

- etc.) Lar. Columbia (Pace, Yellow Indian, Tinley, etc.) Large dingy yellow and red stripes; flesh yellow, buttery, rich and sweet; quality best. End of July to middle of August.
- r. Berckmans. Large; creamy white, blush cheek; flesh white, melting, vinous, of the highest flavor. A seedling of the Chinese Cling but surpasses any variety of the same parentage maturing at the same season. Middle to end of July.
- ELBERTA. Large; yellow, with red cheek; juicy and of good flavor; flesh yellow. Supposed to be a seedling of Chinese Cling. Ripe middle of July. An excellent shipping variety. No other Peach has made such a name for shipping, and none is cultivated more extensively. tensively.
- Emma. Large; yellow, with red cheek; flesh yellow, firm, juicy, best quality. Ripe July 25 to August 5; follows Elberta. An excellent market sort in some
- sections.

 Everbearing. (Freestone of Indian Type.) In some sections this remarkable peach begins to ripen about July 1st to 15th and continues to produce successive crops until about the middle of September. Fruit varies in size from large to medium, is creamy white, mottled and striped with light purple and pink veins. Oblong, tapering to the apex; flesh white with red veins near the skin. Very juicy and of excellent flavor. We do not recommend the Everbearing Peach for Commercial Orchards, but for family use only use only.
- leitas, or Yellow St. John (May Beauty.) Medium, roundish; orange-yellow, with a deep red cheek; juicy, sweet and highly flavored; flesh yellow. Ripens end of June to July 10th. Fleitas.
- Florida Gem. (For Florida and Sub-Tropical sections only.) A seedling of Honey, of large size; highly colored; roundish, oblong, pointed; sweet and juicy; red at the pit. A valuable market sort; ripens, July 1 to 10 in north Florida.
- FORD'S. An excellent large white flesh peach of Chinese type; quality good; a heavy and reliable bearer; June 15th to 30th.
- Governor Hogg. Large; white, with beautiful cheek; flesh white, tender and juicy, highly flavored; red at pit, semi-cling; June 20th to 25th.
- at pit, semi-ching; June 20th to 25th.

 GREENSBORO. Origin, North Carolina. Ripens a week later than Alexander, but much larger. Round, sometimes elongated; flesh white, very juicy, of good quality; skin white, with red cheek, highly colored in the sun. A favorite and profitable early market sort.

 HILEY (Early Belle.) Large; white, with beautiful red cheek; flesh white, quality best. Prolific bearer. Ripens June 25 to July 5. The best shipping variety of its season.
- of its season.
- Honey. Medium size; oblong with a sharp re-curved point; creamy white, washed and mottled carmine; of honey sweetness; June 15th to July 1st.
- Imperial. A Florida variety; very large, roundish, oblong; skin greenish yellow, red blush; flesh white, juicy, and of excellent flavor. Ripe in North Florida June 25th to July 5th.
- MAYFLOWER. A new variety from North Carolina, very highly recommended by the originator; one week earlier than Sneed; fruit round and entirely covered with red; blooms late; very hardy; not fruited as yet with us.
- allas. Seedling of Honey originated by Dr. L. E. Berckmans. Fruit resembles the parent, but is much larger and more round in shape; flesn white, melting and vinous; July 10th.
- and vinous; July 10th.

 Peen-to Free. Fruit 2 to 2½ inches in diameter, very flat; skin pale greenish white, with a beautiful mottled red cheek; flesh finely grained, good quality. As this Peach colors a long time before maturity or full development, it is often gathered prematurely, which renders it unfit for use. It should be allowed to hang upon the tree until approaching full maturity, when it shows its excellent quality. As this Peach blooms in January, it is only adapted to Florida and sub-tropical sections. Matures in Florida from April 1 to May 10.
- Picquet's Late. Very large; yellow, with a red check; flesh yellow, buttery, rich, sweet, and of the highest flavor. Maturity from end of August to middle of September.
- Red River. An improvement on Early Louise, but of

larger size; quality best; creamy white, with a pink cheek. June 10th to 15th.

ROBERT. Large; creamy white, with crimson cheek:

- cheek. June 10th to 15th.

 ROBERT. Large; creamy white, with crimson cheek; flesh white, slightly veined piak, melting, juicy and vinous, quality best. A reliable sort; August 15th.

 SALWAY. A well-known and popular variety; large; dull yellow, mottled brownish red; flesh yellow, firm, but rather acid. Fine flavor. August 15th.

 SNEED (Bowers, Peebles.) Medium; creamy white, with carmine mottling; flesh greenish white, juicy; semi-cling; quality fair. Ripens on an average of six to eight days before the Alexander.
- Summerour, or Atlanta. Very large, round; deep yellow; flesh yellow, juicy, sweet and of good quality. Maturity from middle to end of September. This Peach fills a gap which has long been open in the season of maturity, because it ripens after all the good freestones are gone.
- good freestones are gone.

 THURBER. Large to very large; skin white, with light crimson mottling; flesh very juicy, vinous and of delicate aroma, of exceedingly fine texture. Maturity 1st to 10th of July. A seedling of Chinese Cling, which it resembles in size and beauty, but is perfectly free. This variety has seldom failed to yield a crop of fruit when other varieties failed, and it highly wired as a market remarket. is highly prized as a market sort.
- WADDELL. Of medium size, fine shape; skin greenish white, almost covered with red; flesh white and juicy; very prolific; a fine market sort. Ripe June
- WONDERFUL. Very large; deep yellow, with carmine blush; flesh yellow, firm, good. Good for late marketing.

CLINGSTONES

- Albright. Large; white, changing to light orange; juicy, sweet, very good; middle of October.
- Bidwell's Early. (For Florida and Sub-Tropical sections only.) A Peen-to seedling; creamy white with pale pink cheek; flesh very fine grained, buttery, melting and juicy; semi-cling; size, medium to large; ripens in North Florida early in May.
- Demming's September. Large, oblong, with a protuber-ance; yellow, with red cheek; flesh yellow, red near the stone, juicy, vinous and good; resembles Lemon Cling, but one month later.
- Eaton's Golden. Medium; skin golden yellow, with occasionally a few pink spots; flesh yellow, sweet juicy, apricot flavor. Middle of September. Superior for canning.
- GENERAL LEE. Improved Chinese Cling. Above medium, oblong; creamy white, with carmine wash; flesh very fine-grained, melting, very juicy, and of high flavor; quality best. July 1 to 10.
- Heath Late White. (White English, Eliza Thomas, Potter's September, Rauy, White Globe, Henrietta, etc.) Large, oval, with sharp apex; skin creamy white, very seldom with any red; flesh pure white to the stone, juicy and sweet, with good aroma; very popular for preserving. Ripens beginning of September.
- Juno. Very large; deep yellow, mottled with orange-crimson; flesh yellow, fine-grained, very juicy, vinous, subacid; quality best. August 10 to 20.
- Kent. An excellent new variety which originated at Augusta, Georgia; fruit of large size slightly depressed at apex; greenish yellow skin tinted carmine at apex and on cheek; flesh yellow, buttery, of fine flavor; skin very tough, but peels readily; August 1st to 15th.
- Oriole. Large; yellow, rich, buttery. Middle of August. A yellow-fleshed Chinese Cling.
- Pendleton. Very large; yellow; very good quality. Beginning of September.
- meapple. (Lemon, Kennedy's Carolina, Allison Early, Lemon Cling, etc.) Large; oblong, with a protuber-ance like a lemon; skin golden yellow, tinged with dark red; flesh yellow, slightly red at the stone, juicy, subacid, of excellent quality. Middle of Au-Pineapple. gust.

- gust.

 Plant. Very large; covered with red; flesh yellow, juicy, rich and sweet. An improved Orange Cling; July 25th to August 10th.

 Stonewall Jackson. Almost identical to General Lee in size and quality, but ripens a week later; tree a more compact grower. July 10th to 20th.

 STINSON'S OCTOBER. Large; white, with red cheek; of very good flavor. The best very late Peach. The most profitable late Peach yet introduced for southern markets. Middle of October.

PEARS

This list of select varieties is reduced to such as have been well tested and proved valuable throughout the largest section of the South.

We grow standard pear trees principally, but can supply dwarfs of a few varieties as below mentioned:

PRICE OF TREES:-Per 10 \$3.00 2.00 Each. Per 100 \$25.00 \$0.35 .25 17.50 .25 2.00

Distance for Planting-Standard trees, 20 to 25 feet apart each way.

ORIENTAL VARIETIES

This type is perculiarly adapted to the South. We offer an immense stock of thrifty, well-grown trees.

KIEFFER. Fruit large to very large; skin yellow, with a light vermilion cheek; flesh brittle, very juicy, with a marked musky aroma; quality good. Matures from September to October. Tree very vigorous and very prolific. Begins to bear when four years old. As a fall Pear there is no variety as yet disseminited which has given such profitable returns, and the wonderful fertility of the tree is surprising. If allowed to hang upon the tree until the beginning of wonderful fetfility of the tree is surprising. If allowed to hang upon the tree until the beginning of October, and then carefully ripened in a cool dark room, there are few Pears which are more attractive. In point of quality it combines extreme juiciness with a sprightly subacid flavor and the peculiar aroma of the Bartlett. It is then an excellent descent facility. sert fruit.

arber. Resembles the Kieffer in size, appearance and quality, but matures here in August and between the LeConte and the Kieffer. A thrifty grower and valuable variety.

Hawaii (or Sandwich Island). Medium; round, Bergamotte shaped. Very prolific; foliage luxuriant; fine tree. Valuable for cooking and canning purposes. October to December.

LeConte, or Chinese Pear. Fruit large, pyriform; skin smooth, pale yellow; quality very variable, usually of second quality, but if allowed to mature slowly in a cool, dark room, or drawers its quality improves remarkably. Maturity from July 20 to the end of August. Trees begin to bear fruit when five years old.

Smith's Almost identical with LeConte, in size, shape and quality, but a few days earlier.

EUROPEAN VARIETIES.

SUMMER

Alamo. Origin, Texas. Large; yellow, bronze cheek.

Tree vigorous grower; bears young.

Bartlett. Large; buttery, melting, of rich flavor; very popular. Ripens end of July and during August.

Belle Lucrative (Seigneur d'Esperen, Fondante d'Automne.) Large; melting, delicious; fine grower; bears abundantly and regularly. End of July and August. Beurre Giffard. Medium size; juicy. Middle of June. Tree a straggling grower.

Clapp's Favorite. Resembles Bartlett, but ripens a few days earlier. Fine flavor. Tree a vigorous grower.

Doyenne d'Etc. Small; melting; very good. Tree a moderate grower. Beginning of June.

Flemish Beauty. Large; melting, sweet; handsome. August.

Koonce. Medium to large; very handsome; juicy, sweet, very good. Tree a vigorous grower. Middle of June.

Petite Marguerite. Small, very early, an improvement upon Doyenne d'Ete. Beginning of June.

Philadelphia. Large, melting, very good; July 15th.

ckle. Of exquisite flavor; perhaps the standard of quality in Pears. Tree a stout, slow grower. August. (Can supply this in both standard and dwarf trees.)

Wilder. Small to medium; yellow, with dark red cheek, melting, sweet and very good. A very attractive Pear. Beginning in June. The tree is of vigorous and symmetrical growth; a valuable early market

AUTUMN AND WINTER

Beurre d'Anjou. Large; juicy, melting. Fine tree, and regular bearer. September. (Can supply this in both standard and dwarf trees.)

Very large; buttery, rich; vigorous grow-Beurre Diel. September.

er. September.

Beurre Superfine. Large; melting, subacid. Fine tree and regular bearer. August. (Can supply this in both standard and dwarf trees.)

Duchesse d'Angouleme. Very large; melting, juicy and well-flavored. Tree a vigorous grower and most reliable bearer. Middle of August to September. (Can supply this in both standard and dwarf trees.)

Lawrence. Very large; melting, rich. Tree a remarkably fine grower. September and October.

Sheldon. Large round, russetty; first quality; last of August.

August.
N. B.—In addition to the varieties listed above, we can supply a few trees each of ten other desirable

PERSIMMONS (JAPANESE)

(Diospyros Kaki)

PRICE OF TREES:-Per 100 \$4.00 2.00

Among. (Yemon.) Round, flattened, deeply ribbed; dark orange-red; 2½ to 3 inches in diameter; average weight six ounces; flesh red, very sweet, and edible while still solid.

Hachiya (beehive in Japan.) (Synonyms: Costata, Imperial, Yomato, etc.) Oblong, with a blunt apex, slightly ribbed, 2½ by 3 inches; average weight 5 ounces; flesh deep orange red, astringent while solid, but sweet and very good when soft. Should be house-ripened, and can be kept until March. Tree of vigorous and tall growth.

Hiyakume (100 "me," a unit of Japanese weight.)

This is perhaps the most desirable of all the round red-fleshed varieties, and, as the fruit affects various shapes, it is known under many names, such as Pound. Tane-Nashi or Seedless, etc. The Agricultural Bureau of Tokio gives the latter name to a variety with black mottled apex, but we find both round and elongated forms upon the same tree, as also uniformly orange and orange-yellow colored specimens, while many are heavily tipped with black. This variation of form and color has doubtless led to its array of synonyms. Fruit large, averaging 3 inches in diameter and 5 ounces in weight; usually

DEDSIMMONS Continued

flattened, but elongated forms are quite common upon the same branch; flesh bright orange-red. Keeps very late; must be soft before being edible. Tree of moderate height.

Maru. Medium size, shaped like a tomato; flesh lightcolored; fine quality. Sometimes brown-fleshed specimens are produced, which are edible while hard.
Miyotan (Mazeli.) Round or slightly oblong, 2½
inches in diameter; skin deep orange-red; flesh usually deep reddish brown, but specimens of half brown

and half red flesh are often produced on the same tree; keeps late. The brown-fleshed specimens are edible while solid.

Okame. (Mikado.) Large, roundish oblate, sometimes with quarter marks; skin orange-yellow; flesh brownish red, good quality. Edible while solid.

Tsuru-no-ko. (Stork Egg, Mino Kaki.) Large, oblong, 2 ½ by 3 ½ inches, weight 4 to 5 ounces, sometimes 10 ounces; skin bright red, some specimens covered with black at apex; flesh red, very good; keeps late. Edible only when soft. Foliage long and shiny; tree compact, of vigorous growth.

PLUMS

Per 10 \$3.00 Each. Per 100 PRICE OF TREES:-5 to 7 feet, extra heavy \$0.40 \$25.00 2 00 17.50

CHICKASAW PLUMS

(Improved Type)

Varieties of this type are less liable to attacks of curculio than those of European origin, and combine vigor of growth with great productiveness. Plant trees 15 feet apart each way.

Cumberland. Large; yellow; juicy, sweet, good. Maturity August and September. Very prolific. Tree thrifty and good grower.

Wild Goose. Large, somewhat oblong; bright vermillion-red; juicy, sweet, good quality; cling. Ripens middle of June. A very showy and fine market fruit, pro-lific bearer. Profitable for early shipments.

EUROPEAN PLUMS

The following varieties of Plums thrive best in the Piedmont sections

Clyman. Seedling from California. Large; reddish-pur-ple; flesh firm; freestone; vigorous and a good bearer.

Giant Prune. The largest Prune known; fruit averaging 1½ to 2 ounces each; retaining the good qualities of the smaller varieties. Desirable for the upper sections.

Imperial Gage. Large; oval; golden green; juicy, rich, first quality.

Lombard. Medium, violet-red; juicy, good; hardy and productive. The leading market variety. Ripens early in July.

Shropshire Damson. ropshire Damson. Medium; dark purple; este for preserving. Tree vigorous and productive.

JAPANESE PLUMS

Prunus triflora of botanists: Prunus Japonica of pomologists.

Abundance, or Yellow Flesh Botan. Round, with pointed bundance, or Yellow Flesh Botan. Round, with pointed apex, but varies from quite round to sharply-pointed. Skin yellow, ground heavily washed purple-carmine and a darker cheek; flesh yellow, very juicy, subacid, with apricot flavor; quite firm; skin tough; clingstone; quality best; pit large. Maturity June 15 to July 5. We also have this variety under several names as received from Japan, all proving identical. One of the best early varieties, and valuable for nothern and middle states. Carries well to distant markets. After fruiting this variety extensively for many years, we consider it the most desirable for shipping North and West. Fruit should be thinned, otherwise the size is reduced and the quality is inferior. ferior.

America. Fruit very large; glossy coral-red; flesh light yellow; good quality; very hardy. A very valuable sort. Excellent for jellies. Ripens middle to last

pple. (From L. Burbank, 1898.) Fruit large, 2½ inches in diameter; reddisa-purple when ripe; fiesh firm, deep red, sweet or subacid, rich, high-flavored; nearly freestone. Ripens middle to last of June. Apple.

Burbank. In general characteristics resembles Abundance, or Yellow-flesh Botan. Color cherry-red, mottled yellow; shape usually more globular; flesh, flavor and quality are identical, but its period of maturity

here is from two to three weeks later or middle to last of July. The tree is of very vigorous habit, slightly differing in foliage. Valuable also for northern states

Chabot. Two to 2½ inches long by 2 inches broad; yellow ground, nearly covered with carmine-red; flesh orange-yellow, very solid, subacid; quality very good; clingstone. Maturity end of July. Identical good; clingstone. Maturity end with Bailey of several growers.

Chalco. Tree an unusually strong grower. Productive and hardy; fruit almost standard; large flat tomat-shaped; reddish-purple; flesh yellow, firm and meatv, very sweet. Ripens before Burbank.

Combination. One of Burbank's best. An extremely handsome, large, early light crimson plum of the very best quality. Flavor unsurpassed. Nearly globular, uniform; flesh light yellow; nearly freestone. Ripens 5th to 15th of June.

Douglass (Synonyms: Munson, of Prof. Bailey; Hytan-Kayo, of Texas growers.) Large, pointed; dark pur-plish-carmine, with blue bloom; juicy, sweet; very good; clingstone. July 20th to August 1st. Exceed-ingly attractive as to color.

First. As its name indicates, it is the first plum to ripen. Medium size; pale amber, with faint blush on sunny side; flesh moderately firm; sweet and juicy. Ripens three weeks earlier than Red Nagate.

Georgeson. Round; clear gold or yellow; flesh firm, yellow, sweet and of gage flavor. June 15 to July 1.

yellow, sweet and of gage havor. June 15 to July 1. Kelsey. Size large to very large; often 7 to 9 inches in circumference; heart-shaped; color greenish yellow, overspread with reddish purple and blue bloom; flesh very solid, yellow, rich and juicy, and with excellent flavor; pit very small. Semi-cling. Maturity middle of July to end of August.

middle of July to end of August.

Kerr (Hattankio No. 2.) Variable in shape, usually pointed, 1% by 1% inches, but perfectly round specimens are often produced upon the same tree. The pointed form is the Hattankio-Togari (Togari means pointed): the round form is sometimes called Hattankio-Maru (Maru means round). Skin bright yellow; flesh yellow, juicy, subacid, gage flavor; quality very good. Clingstone. Maturity from June 10th to 20th. Very prolific; an excellent early market, as well as dessert fruit.

Ogon (Shiro-Smomo, or the White Plum.) Medium to large, round, golden-yellow; flesh yellow, firm, sub-acid; quality good; freestone. June 1st to 15th. Tree of vigorous growth; a good cooking fruit.

Red Nagate, or Red June, or Long Fruit. 1% by 1½ inches; pointed; skin thick, purplish-red with blue bloom; flesh yellow, solid, somewhat coarsegrained, juicy, subacid, with Damson flavor; clingstone; quality good. Maturity 10th to end of June. Very prolific, showy and attractive in color. It ripens a week before Abundance, and is the earliest large-fruited market variety.

dark purplish-red, mottled with bluish bloom; shape globular, or with sharp points; flesh firm, juicy, dark red or blood color, well-flavored and firm; quality very good; pit small. Unsurpassed in quality for canning. Maturity middle of July. Tree very vigorous. One of the most valuable varieties for this section and adapted to the Middle and Northern States. Satsuma, or Blood Plum. States.

ickson. Fruit large to very large; obconical; waxy white when half-grown, then the color gradually changes to pink and to dark crimson-purple; flesh very firm, yellow, juicy, subacid and highly flavored; pit small; clingstone; best quality. July 10 to 25.

QUINCES

40c each; \$3.00 for 10, except where noted.

These succeed best in strong, clay soils, in special localities and in the Piedmont section. They can be grown in bush form. Being somewhat subject to leaf-blight, the trees should be sprayed with Bordeaux mixture before the buds swell, repeating the spraying throughout the summer at intervals, as necessary. However, in some situations Quinces seem to be free of blight.

Angers. A productive, old variety. Fruit rather acid. 25 cents each; \$2.00 for ten.

Apple or Orange. Large, round. Excellent late variety. Bears abundantly.

Rea's (Rea's Mammoth). A very large and fine variety of the apple quince. A thrifty grower and productive. By some considered the best of all quinces.

NUT-BEARING TREES

ALMONDS

1-year-old, budded trees, 4 to 5 feet.....\$0.30 \$2.50

Princess and Sultana. Both are prolific and soft-shell varieties, and are the varieties mostly cultivated in Europe for commercial purposes. Almonds are unreliable in most of the middle sections of the South, as they bloom early, and the fruit is apt to be killed by late frosts. They are more successful in Florida.

CHESTNUTS

PECANS

All of our Pecans are budded on 2-year thrifty seedlings, and are, therefore, very heavy and stocky. We offer a beautiful stock of the following well-known varieties

				10	100
			heavy\$1.50		
3	feet,	very heav;	7 1.25	10.00	90.00
2	feet,	heavy	1.00	8.00	75.00

Bolton. A Florida variety of excellent quality. Nut oval shape; large size, running forty to the pound. Fine cracking quality, heavy kernel of good flavor. Tree annual and prolific bearer.

Frotscher's Egg Shell. Very large; nuts averaging 45 to 50 to the pound. Shell very thin; can be cracked with the teeth; meat sweet and of fine quality, and can be removed entire from the shell. One of the best Pecans grown.

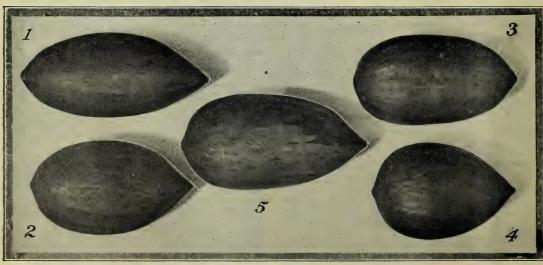

Georgia Giant. Large size; base rounded; apex tapering; shell medium thickness, brittle; kernel plump, full, flavor sweet; quality good.

Jerome. Originated in Louisiana, and is a seedling of "Pride of the Coast," and very superior to the parent; the tree is very healthy and a vigorous grower. Nut very large, shell about the same thickness as Pride of the Coast, good cracking quality. Nut is of excellent quality and well filled. Will run from 30 to 50 to the pound.

For a number of years we have inadvertently sent out this Pecan under the name of PRIDE OF THE COAST. This Pecan is unquestionably a very superior variety, and, when it is better known, will become one of the standard sorts.

Stuart. Nut of large size, about 2 inches long, by %-in. in diameter; shell thin; quality good; heavy bearer.

Van Deman. Nut large. About 45 to 50 to the pound. Oblong; shell quite thin; good quality.

PECANS-Continued.

PECANS—Continued.

The planting of Grafted and Budded Pecans has now passed the experimental stage, and it has been practically demonstrated that an orchard of the better varieties of grafted and budded pecans is a paying investment. The market demands the larger exades of nuts, which are beginning to be well-known for their high quality, and the only way to make Pecan growing pay is to plant budded or grafted trees of such varieties as combine large size, good navor, thin shell and easy cracking qualities. When purchasing trees the reliability of the nurseryman should be known, because many inferior trees are palmed off by unreliable dealers. It is known that some varieties which are best adapted to the lower sections of the south do not always give the same results when planted in higher localities. Whilst there are scores of varieties now cultivated, a half-dozen of the best well-known sorts would be amply sufficient for commercial groves.

Pecans should be planted from 40 to 50 feet apart, and in very rich alluvial soil, even 75 feet would be the proper distance. The tree is hardy as far north as lows. Its natural distribution includes 15 degrees. Anv land producing a good growth of hardwood trees, such as oak, hickory, etc., is suitable for the profitable production of this nut, but the moist and sandy land of the rivers and creek bottoms, even if they are subject to occasional overflow, are particularly adapted to this tree. But the richer the land the earlier and larger the yield. This tree takes very kindly to heavy fertilization. The best time for transplanting is after the leaves fall in autumn, and as late as March.

The land between the rows can be planted for several years in cotton, peas, potatoes or vegetables. If these are heavily fertilized, it will increase the growth of the trees. A top-dressing of stable manure or commercial fertilizer within a radius of 4 to 6 feet from the tree will be found a good investment.

The commercial vanue of nuts varies according to size. Nuts averaging forty to

DIRECTIONS FOR HANDLING AND TRANSPLANTING PECANS

Take great care in preventing the roots of the trees from becoming dry by being exposed to the weather. Keep the roots moist and covered at all times. When taking the trees to the field for setting they must be carefully covered with moss, wet sacks or something else to protect them from drying out. This is important. Only one tree should be removed at a time and this set at once in the hole previously dug. This hole must be at least two feet wide and of proper depth. Cut off the ends of all bruised or broken roots. It has been practically demonstrated that it is advisable to cut off a part of the taproot, as this causes the roots to throw out laterals. This will allow the tree to receive more food, and, at the same time, affords it a firmer hold upon the land. Use a sharp knife for this; do not use an axe or hatchet. Place the tree in the hole about two inches deeper than it originally stood in the nursery row; fill the hole about half full with well pulverized top soil in which there is a proper proportion of well rotted stable manure. If this is not available, use the proper amount of high grade fertilizer. This must also be thoroughly mixed with the above mentioned soil. Pack the earth well about the roots of the tree—the firmer, the better. Fill up the hole and pack the dirt well, but leave at least two inches of loose soil on top. If the soil is very dry some water should be pored about the tree when the hole is partly filled. When the trees are more than 3 or 4 feet in height the top should be cut back to within 3 feet of the ground. Do this after the tree is planted. Be careful not to break the eyes off the tree in handling. Keep the trees well cultivated and properly pruned.

WALNUT

The best soil for Walnuts is a strong clay, rich and somewhat stony; hence, many acres of land which are difficult to cultivate for ordinary crops are available for Walnuts. Never plant these trees in pipe-clay or undrained soil.

BLACK WALNUTS. Our Native Species.

The Japan Walnuts succeed from Massachusetts southward. It seems to be particularly successful in the Southern States. The tree is very handsome, has a large spreading top. It makes a useful as well as a very ornamental tree. At three years of age the tree commences to bear. The nuts are borne in clusters of from ten to twenty. The shells are moderately thick, but the kernels are very sweet. We offer two varieties:

Juglans Cordiformis. Nut broad, pointed, flattened, medium size, somewhat resembling the shell-bark hickory. If cracked longitudinally the kernel can be hickory. If cracked longitudinally the kernel can be removed entire.

Juglans Sieboldiana. Shaped like the butternut. Shell thicker than that of the English Walnut.

Can supply Walnuts in immense quantities. Price per 1,000 will be given on application.

borne in large clusters and ripen well together. Very sweet, no core; heavy bearer. A valuable sort. 75c for 10; \$2.00 for 50; \$3.50 per 100.

Erie. Very productive. Fruit large, round, good quality. One of the most popular sorts. Early.

Iceberg. This remarkable Blackberry is one of Luther Burbank's productions. It succeeds admirably in this climate. The fruit is transparent white. The seeds which are usually small can be seen in the ripe berries. The fruit is borne in large clusters. The berries are of large size and of good quality. The plant is an enormous bearer and the fruit lasts through a long period. A desirable variety, strong plants, \$1.00 for 10.

Mersereau. A most valuable variety. Fruit of immense size. Early and enormous bearer; very hardy. A very popular market sort. 75c for 10; \$2.00 for 50; \$3.50 per 100.

\$3.50 per 100.
 Wilson's Early. A fine, very large, early sort. Of excellent flavor; ripens finely. Productive, and a good market sort. Ripens end of May.

CURRANTS

These will succeed in the upper sections, but are of no value in this latitude as they burn out during summers. Plants should be set four feet apart in rich ground. Cultivate well and mulch heavily. Prune out old wood leaving vigorous shoots. Strong Plants, \$1.00 for 10.

Black Champion. Very productive, large bunch, and berry. Excellent quality; strong grower. Victory. Large bright red bunches. long berries, me-dium to excellent quality; erect grower; very pro-ductive; ripens late.

DEWBERRIES

50 100	Strong Strong Strong Strong	Plants Plants	for	\$0.50 1.50 2.00 15.00
1,000	Strong	Plants	for	15.00

CULTURE-Use short, stout stakes driven at the end of each row of canes, with a cross-piece 18 inches long nailed to each stake 21/2 to 3 feet from the ground. On the top, near each end of these cross-pieces, drive a stout nail slanting toward the stake upon which to catch a wire. Two lines of No. 14 galvanized wire, one on each side of the row, are fastended to one of the end stakes and run on the ground between the rows to the other end stake. These wires are now drawn as taut as possible and securely fastened to the other end of the row. The wire on each side is now raised, pressing the canes inward, and caught on the nails, thus holding all the canes closely together in the row.

Austin's Improved. Fruit very large, subacid, vinous, but of second quality. Enormous bearer. The most productive market variety we have ever grown, as it is 8 to 10 days ahead of any other. Strong and vigorous grower and stands our hottest summers perfectly. Free from rust. Twenty-five two-year plants produced forty quarts of immense berries.

RASPBERRIES

50 100	Strong Strong	Plants Plants	for	\$0.50 1.50 2.00 15.00
	Strong			

CULTURE—The same as for Blackberries and Dewberries. These thrive best in a deep moist, well-drained soil; the lighter loams are best for the red and the heavy loams for the black-caps. To make a success of Raspberries, the land should be able to withstand drought well. Cottonseed meal, pure ground bone or fertilizers containing a good proportion of potash are best and should be liberally applied during the winter and early spring. If the plants are mulched with leaves or straw they will give better results. Columbia. Fruit resembles Shaffers; very large, purplish; vigorous and productive.

Cuthbert. After several years' trial this proves the best and most reliable of the red-fruited varieties. Fruit red; large, of excellent quality; yield very prolific; ripens middle of May and continues for several weeks.

Golden Queen. Fruit golden yellow; similar in quality to Cuthbert, to which it is evidently a close relation. Its fine color attracts the eye. Prolific; stands our summers. CULTURE-The same as for Blackberries and Dew-

Gregg (Black Cap). Very productive, large size; firm; black.

GRAPES (Native Varieties)

Nothing but varieties that have stood severe tests are included in the following lists, but we can also supa few vines each of several additional varieties. We have a large stock of extra strong 1 and 2-year-old vines. ply a few vines each of several additional varieties.

ASSORTMENT—OUR SELECTION OF VARIETIES: PRICE OF 10 Strong Vines in 10 best varieties for table use \$1.00 Special quotations will be given for lots of 1,000 and upwards.

FOR PURCHASER'S SELECTION—Not less than 5 vines of one variety will be charged at the rate for 10; nor less than 40 vines of one variety will be charged at rate for 100.

Agawam (Rogers' No. 15.) Large; dark red. 10 cents each; 80 cents for 10; \$4.00 per 100.

Amber. Pale amber, long bunches; berry medium, sweet, fine flavor. Later than the Concord. 15 cents each; \$1.25 for 10; \$5.00 per 100.

arckmans. Cross of Clinton and Delaware. Bunch larger than Delaware, but not so compact; berry one-third larger than Delaware, of same color and quality. Matures middle to end of July. 15 cents each; \$1.25 for 10; \$5.00 per 100.

Brighton. Bunches medium; berries large, reddish; skin thin; quality best. An excellent early table or market Grape. Vigorous. 15 cents each; \$1.25 for 10; \$6.00 per 100.

Catawba. Bunches and berries large; deep red; with

lilac bloom; juicy, vinous and of musky flavor. 10 cents each; 80 cents for 10; \$5.00 per 100.

oncord. Bunches and berries very large; blue-black, with bloom; skin thin; cracks easily; flesh sweet, pulpy, tender; quality good. Very prolific and a vigorous grower. One of the most reliable and profit-able varieties for general cultivation. 10 cents each; 80 cents for 10; \$4.00 per 100.

Delaware. Bunch compact; berries medium; light red; quality best; moderate grower, but vine very healthy; very prolific and more free from disease than any other variety. The most popular Grape grown; unvery profile and most received that a state of the variety. The most popular Grape grown; unsurpassed for table and for white wine. 15 cents each; \$1.25 for 10; \$6.00 per 100.

Elvira. Pale green; skin thin; sweet and juicy; one of

GRAPES-Continued

the most reliable Grapes for the mountain regions. 10 cents each; 80 cents for 10; \$4.00 per 100.

es. Bunches very large; berries large; blue; skin thick; flesh pulpy, sweet, very musky; vigorous grower and prolific bearer. Very hardy and popular as a wine Grape. 10 cents each; 80 cents for 10; \$4.00 per 100.

Lindley. Bunch medium, loose; berries medium to large; color red; flesh tender, sweet, rich aromatic flavor. Midseason. 15 cents each; \$1.25 for 10; \$5.00 per 100.

Moore's Diamond. Large; greenish white; juicy; little pulp and of very good quality. Yields abundantly; fruit perfect and showy. Ripens very early in July; the best very early white variety. 15 cents each; \$1.00 for 10; \$5.00 per 100.

Moore's Early. Bunch medium; berry large, round; black, with heavy blue bloom; medium quality. Very early. Desirable market sort. 15 cents each; \$1.25

Niagara. Bunch and berry large; greenish yellow; flesh pulpy, sweet, foxy. Its remarkable size and fine appearance give it much popularity as a market variety; vigorous and prolific. 10 cents each; 80 cents for 10; \$4.00 per 100.

Progress. Bunch large; berries medium; blue-purple; pulp dissolving; vinous. An excellent table Grape. 15 cents each; \$1.25 for 10; \$5.00 per 100.

Worden. Resembles Concord, but is a few days earlier and generally regarded as a better Grape. 15 cents each; \$1.25 for 10.

BULLACE, or MUSCADINE TYPE

(Vitis Rotundifolia, or Vulpina)

PRICE .-Each. 10 100 1000 Strong, 2-year, Trans-planted Vines \$0.15 \$1.25 \$10.00 \$70.00

This type is purely southern and is of no value for the northern or western states. Vine is free from all disease. The fruit never decays. The product is very large, and the cultivation reduced to the simplest form. Plant from 20 to 30 feet in a row, trained on an arbor or trollie

Flowers. Bunches have from 15 to 25 berries, black, and of sweet, vinous flavor. Matures from end of September to end of October, or four to six weeks later than Scuppernong.

later than Scuppernong.

James. Berries very large, blue-black, in clusters of from six to ten; skin very thin; pulp tough, sweet and juicy, but not dissolving; quality very good. A showy fruit. Ripens after Scuppernong.

Scuppernong. Berries large, seldom more than eight to ten in a cluster; color brown; skin thick; flesh pulpy, very vinous, sweet, and of a peculiar musky aroma. A certain crop may be expected annually. Vine is free from all disease and insect depredations. Fruit has never been known to decay before maturity. Wonderfully prolific. Popular wine Grane: wine

Fruit has never been known to decay before maturity. Wonderfully prolific. Popular wine Grape; wine when properly prepared resembles Muscatel. homas. Bunches from six to ten berries; berries slightly oblong, large, violet, quite transparent; pulp tender, sweet and of a delightful vinous flavor. Best of the type. Maturity middle to end of August. Very little musky aroma. Makes a superior red wine. Thomas.

MISCELLANEOUS FRUITS

ELAEAGNUS (Japan Oleaster)

ELAEAGNUS (Japan Oleaster)

Elaeagnus Edulis (Longipes.) Gumi Fruit of the Japanese. A low-growing shrub. We have specimen plants about 10 feet high and 15 feet spread, which have, for a number of years, produced enormous quantities of fruit, which ripens here early in May, and continues through a period of four weeks. Fruit about one-third inch in length, oblong, bright red and covered with minute white dots. This plant is well worthy of cultivation, both for ornament and for its fruit, which is juicy and edible, with a sharp, rather pungent, agreeable flavor; makes an excellent jelly. Foliage light green, silvered beneath. Flowers fragrant. Plants perfectly hardy.

Each. 10 100

Field Grown Plants: bearing size, 4 feet......\$0.75 Strong, Field Grown Plants: \$6.00 \$50.00 4.00 30.00 2.00 18.00

ELAEAGNUS EDULIS

Simonii (Simon's Oleaster.) Fruit larger than Edulis; matures here in March. Owing to its early blooming properties, the fruit is apt to be killed in this latitude by late frost. The plant is an evergreen and is very ornamental.

ERIOBOTRYA JAPONICA

(Loquat; Japan Medlar; Biwa of the Japanese)

Trees of medium height with long glossy evergreen leaves, flowers white, in spikes, and produced in early winter. The fruit is produced in clusters which matures from end of February to April. Owing to early season of blooming, fruit is seldom perfected north of Charleston, but otherwise tree perfectly hardy, and is extremely ornamental. This plant is well adapted to the southern coast belt. We offer four varieties as below: helow:

below:

Medlar, Japan. Seedling; friut the size of a wild goose plum, round or oblong, bright yellow, subacid and refreshing. Two-year seedlings, pot-grown, 25 cents each; \$2.00 per 10.

M. Giant. Grafted plants, all pot-grown. Same as Japan Medlar, but fruit four times as large. One-year, 50 cents each; \$4.00 per 10.

M. Limoncella. A new variety from California; of large size, oval in shape; rich translucent yellow; of pleasant subacid flavor. One-year, pot-grown, grafted plants, 50 cents each; \$4.00 per 10.

M. Palermo. A new variety from Florida, of medium size; oblong shape; pale yellow color, with some fine russet netting scattered over surface; of good quality. One-year, pot-grown, grafted plants, 50 cents each; \$4.00 per 10.

MULBERRIES

PRICES, Except where noted: Each. 10 100 7 to 9 feet \$0.25 \$2.00 \$15.00 5 to 6 feet 20 1.50 12.00

Alba, or Moretti. This is the principal variety used in Europe for silkworm culture. Transplanted trees, well branched.

well branched.

Downing. Fruit of rich, subacid flavor; lasts six weeks.

Stands winters of western and middle states.

Hicks' Everbearing. Wonderfully prolific; fruit sweet, insipid; excellent for poultry and hogs. Fruit produced during four months.

Stubbs. A native variety from Laurens county, Georgia. Produces an immense quantity of fruit of enormous size, 1¼ to 1¾ inches in length, of excellent quality. Bears for about two months. Extremely scarce and difficult to propagate. Strong, one-year, lent quality. Bears for about two months. Extremely scarce and difficult to propagate. Strong, one-year, budded trees, 50 cents each.

MISCELLANEOUS FRUITS-Continued.

OLIVE, PICHOLINE

A variety much esteemed for its rapid growth and early bearing. The tree is also less subject to damage by insects than most other varieties, and ripens its fruit in twelve months, thus bearing a crop annually. Makes excellent oil, and stands with the best for pickling. Olives have been cultivated on the coast of Georgia and South Carolina for many years, and an excellent quality of oil has been produced. A peculiarity of the Olive is that it flourishes and bears abundant crops on rocky and barren soils, where no other fruit trees are successful.

POMEGRANATES

The Pomegranate is hardy in the Gulf States, and the central sections of Georgia and the Carolinas. The plants will sometimes attain a height of 20 or more feet. The plant is of good form and foliage, the bright scarlet flowers make the pomegranate a most ornamental plant. It bears early and profusely. There is a growing demand for the fruit in the eastern markets and the Pomegranate is being grown in some sections on a large scale.

24 to 30 inches, well-branched...\$0.25 \$2.00 \$17.50

Purple-seeded, or Spanish Ruby. Large; yellow, with crimson cheek; flesh purplish crimson, sweet, best quality.

Subacid. Very large; highly colored. Pulp juicy, subacid.

LANDSCAPE AND ENGINEERING DEPARTMENT.

HE realization of the fact that the proper treatment of public and private grounds of every class is one of the useful arts, has called into demand a class of men of special training known as Landscape Engineers and Architects. The members of this profession are trained in such operations as the devising of plans for the establishing of proper grades and ground surfaces; the disposal of drainage and sew-

erage; the construction of boulevards, avenues, streets, driveways, roads and walks; the location of buildings of every class; the laying out of villages, parks, squares, cemeteries, estates, city and suburban home grounds, both for utilitarian and aesthetic effects; also the proper selection, placing and care of trees, shrubs, vines and plants for their special purposes, and according to the existing conditions as to location, soil and climate.

Our firm has had an experience of over twenty-seven years in Landscape Work, and has maintained for a number of years a special Department, whose efforts are entirely devoted to this art.

In this Department a permanent force of Engineers, Landscape Architects, Gardeners and Planting Foremen are employed under the direction of Mr. Robert C. Berckmans.

We are prepared to make professional visits, at nominal charges, and give consultation and advice on all Landscape subjects, such as the laying out and planting of city and suburban home grounds, extensive estates, parks, cemeteries, villages, cities and public improvements. Grading and Planting Plans will be furnished for the improvement of new or the renovation of old grounds for landscape effect.

We are also prepared to contract to execute plans for grading, the construction of roads, drives and walks; planting and general landscape work.

Topographical maps, surveys, plans for drainage systems, etc., will be supplied by our engineering department.

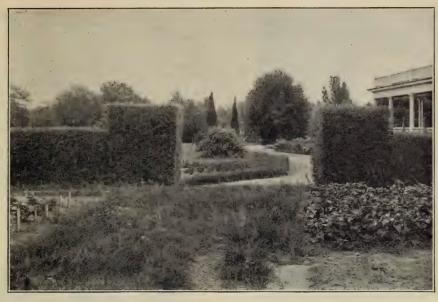

Inquiries as to what to plant, where, when and how, will receive full and prompt consideration.

We solicit correspondence from persons who are interested in beautifying their home surroundings, and from municipalities and manufacturers who contemplate the laying out of parks, villages, or the planting of boulevards, speedways, residential streets and other thoroughfares. Address,

P. J. BERCKMANS COMPANY, Drawer 1070,

Landscape and Engineering Department.

Augusta, Georgia.

ORNAMENTAL DEPARTMENT

DECIDUOUS SHRUBS

We will supply 10 shrubs in 10 varieties, standard size, our selection, for	
Or 100 shrubs in 25 or 50 varieties, standard size, our selection, for	
Or 10 shrubs in 10 varieties, extra heavy, for)
Or 100 shrubs in 25 or 50 varieties, extra heavy for	,

Flowering shrubs are a necessary adjunct to trees in the landscape. The importance of a liberal planting of hardy shrubbery is just beginning to be fully appreciated. Greater attention is now being given to shrubbery, and it is used in large quantities for border and screen effects, as well as for massing in groups and beds. By a judicious selection of varieties, flowering shrubs should contribute as much to the color scheme and attractiveness of the grounds as broad-leaved evergreens and confers.

To meet the increasing demand for Deciduous Shrubs we have this year added largely to our acreage and list of varieties, and we are prepared to supply the most desirable shrubs for the South in large quantities. We grow the best sorts which have been tested as to their adaptability to the South; we also grow very largely of the hardy varieties adapted to the northern sections.

The same directions for the preparation of the soil and planting as given for deciduous fruit trees on page 3 applies to the average deciduous shrub. We cannot, however, too strongly impress the necessity of keeping the ground free from weeds and grass, and loose by frequent stirring after being planted.

A few hints upon planting and pruning deciduous shrub. Nearly all deciduous snrubs which are grown in open ground should have their tops and branches cut back one-third or one-half, as seems necessary. Cut back the most vigorous-growing sorts more than those that are of more dwarf habit. All shrubs that flower on the wood of the preceding year's growth should not be pruned until June or July, when the crop of flowers is over. To this class belong the following:

Althaeas, Pyrus Japonica, Deutzia, Philadelphus, Spiraea, etc. The old wood may be shortened in, in order to promote the young growth, which is to produce flowers the following year. But some varieties, like Hydrangea paniculata, which produce flowers upon the young wood, should be pruned during winter.

ALTHAEA FRUTEX (Hibiscus Syriacus)

ROSE OF SHARON.

Grafted		Each.	10	100
4 feet Grafted		\$0.40	\$3.00	\$20.00
2 foot	z iulius,	. 95	2.00	15.00

These are among our most valuable flowering shrubs, and deserve to be more extensively cultivated, as they produce their flowers in the greatest profusion from May until August. The new European varieties are nearly all of dwarf growth, and the flowers are far superior to the old sorts. We give a list of some of the best:

Althaea Amplissima. Double, deep purple pink, with carmine center; tall grower.

A. Bicolor Hybrida. Semi-double, white, with crimson and maroon center; medium grower.

A. Carnea Semi-Ploena. Semi-double, pale pink, with crimson eye; medium grower.

- A. Comte de Hainault. Semi-double, pale pink, shaded to crimson center; medium grower. Fine.
- A. Coelestis. Single, deep violet-blue, with darker center; very dwarf.
- Semi-double, purple-violet, with A. Double Purple. crimson eye; tall grower.
- A. Fastuosa. Semi-double, pale pink, with crimson center; medium grower.

- ter; medium grower.

 A. Jeanne d'Arc. Double, pure white; tall grower.

 A. Pompon Rouge. Double, deep purple-pink; more compact and superior to Amplissima.

 A. Puniceus Roseus. Large, semi-double, violet-purple with crimson eye; medium grower.

 A. Rubis. Single, deep-heliotrope, with maroon center; medium grower.

 A. Rubra Ploena. Double, rosy-red, with crimson center; medium grower. Very fine.

 A. Totus Albus. Single, pure white; very dwarf.

 A. Violacea Semi-Ploena. Semi-double, deep purple-magenta, with crimson center; tall grower.

 A. Violet Claire. Semi-double, pale violet-blue, with crimson center; medium grower.

ALTHAEA MEEHANII

ALTHAEA MEEHANII

(Hibiscus Syriacus Meehanii)

NEW VARIEGATED-LEAVED ALTHAEA.

PRICES:-		Each.	10
2 ½ to 3	feet, very bushy	\$1.00	\$7.50
24 to 30	inches, very bushy	.75	5.00
18 to 24	inches, bushy	.50	3.00
12 to 18	inches, branched	.25	2.00

This most remarkable Althaea is unquestionably the best of the variegated-leaved class. Habit robust, compact and somewhat dwarf. Leaves beautifully variegated with creamy white, with irregular margins and green centers; the light-colored portions never sunscald or revert to the green. The flowers are single, 3 1/2 to 4 inches in diameter, of a satiny lavender sheen, and purple-blotched at the base of each of the five petals, and are produced in the greatest profusion from June 1 until autumn. This is a remarkably striking plant, and nothing finer can be found during its blooming period, or even previous to the time the flowers make their appearance, as it is excellent for massing or a single specimen. It has proven hardy as far north as other varieties of Althaeas. Plants now over 25 years old in our grounds have reached the height of 8 feet, and have always been entirely free from insects or diseases. As compared with the old variegated-leaved variety, known as H. Buistii, or H. Variegata, whose double, dark wine-colored flowers never open, but remain unsightly, the Meehanii is immensely superior. This variety was received by us over 25 years ago in an invoice of deciduous shrubs and merely labeled "Variegata," but it proved entirely distinct from what was known under that name. Its merits soon became so transcendent that after submitting the leaves and flowers for identification to our esteemed friend, the late Thomas Meehan, who was unable to trace the variety's origin, we dedicated it to him.

We do not hesitate to offer this variety to our patrons, as it has already become very popular wherever known, and is destined to become one of the best variegated deciduous shrubs ever introduced. and are produced in the greatest profusion from June

AZALEA

Azalea Calendulacea. (A. Lutea). GREAT FLAME AZALEA, A native species, growing naturally from New York to Alabama. Very showy the latter part of April. when the plants are covered with a pro-fusion of blooms. Several shades of yellow, orange,

Chilopsis Linearis. A tall-growing shrub from south-west Texas. Leaves linear; flowers lilac; very showy in terminal racemes. Each flower is composed of a corolla-like tube, divided at the end into five lobes,

nicely crimped. Blooms almost continually from spring until frost.

C. Linearis Alba. Similar to above, but with white flowers, and of more dwarf and compact growth. A fine plant.

CHIONANTHUS (White Fringe)

\$4.00 2.00

Chionanthus Virginica. WHITE FRINGE. A very or-namental native shrub. White fringe-like, fragrant flowers in early April.

CLETHRA

(Sweet Pepper Bush, or White Alder)

Each 3 yrs., well branched, 18 to 24 ins....\$0.35 \$2.50

Clethra Alnifolia. A hardy, compact shrub, attaining a height of 3 to 5 feet. Leaves dark green, flowers creamy white, fragrant, in erect racemes. One of our finest flowering shrubs. Blooms in May.

CORCHORUS (Globe Flower)

Corchorus Japonicus Flore Pleno (Kerria Japonica).
GLOBE FLOWER; JAPANESE ROSE—This is an old favorite. It is of spreading habit, with double yellow blooms about an inch in diameter, which appear early in April; effective for massing. Attains a height of about 5 feet. 25 cents each; \$2.00 for 10.

CYDONIA (Pyrus Japonica)

Cydonia Japonica. JAPAN QUINCE, or FIRE BUSH.

The flowers vary from dark red to lighter shades.
These are about the first spring-blooming shrubs,
flowers frequently appearing by the first of January.
and some plants continue in bloom for three months.
Some varieties are of straggling growth and should
be kept pruned in any form desired. Some of these
produce medium-sized fruit which makes good jelly.

G. Juncea. (Spartium Junceum). SPANISH BROOM.

A most beautiful, erect-growing shrub, almost leafless; stems of vivid green, and when laden with its profusion of golden yellow flowers durin. April, it forms a most conspicuous object. It continues in bloom for six weeks.

HYDRANGEA

Prices, except where noted:	Each	10	100
3 years, heavy, well branched, 30 to 36 inches	\$0.50	\$4.00	\$30.00
Strong, field-grown plants, 18 to 24			

.25 2.00 15.00

All require a shady and, where practicable, a rich, moist situation. The color is changeable in some varieties, according to soils.

Hydrangea Arborescens grfl. alba. A recent introduction of great value. Blooms are of very large size, snowy white. A valuable acquisition, as it begins to bloom in April, and lasts almost the entire summer. In form the panicles are similar to H. Hortensis.

Each 10

Strong, 1-year plants \$0.35 \$3.00

H. Otaksa. An improved variety of Hortensis; flowerheads very large; pale rose or blue, according to soil.
 d. Otaksa Monstrosa. A very large-flowered variety; much larger than Otaksa. Beautiful rose-color, shaded white; free bloomer. A great acquisition.
 H. Paniculata Grandiflora. Produces in July immensembles of pure white flowers which lest for gravare.

panicles of pure white flowers, which last for several weeks; a most valuable shrub. A large bed of this plant makes a most striking appearance. This shrub should be grown in rich ground and cut back severely during winter. It will then produce magnificent flower backs. during winter flower heads.

Ramis Pictis, or red-branched. With dark purple stems, and large heads of rose or pale blue flowers, with lighter center.

Rosea. Vigorous habit; flower-heads shaped like those of Thomas Hogg, and as freely produced; color

bright rosy red.

Thomas Hogg. Best white-flowering variety of the Hortensis group. Flowers last several weeks.

HYDRANGEA (Standard)

Iydrangea Paniculata Grandiflora (Standards.) These plants have been trained to a single stem 2½ to 3 feet high, and have a large bushy head. They are most conspicuous as single specimens on the lawn. \$1.00 each.

IRIS (Flag)

IRIS (Flag)

Iris Germanica. (German lris or Flag). The German Iris is one of our most desirable early spring blooming plants. It is a vigorous grower and is of easy cultivation. Flowers are large and conspicuous. The colors are white, blue, purple, yellow, and variously veined and striped. Every garden should contain a collection of these Flags. We offer ten distinct named varieties, strong roots, 15 cents each; \$1.25 for .10; \$10.00 per 100.

I. Kaemferii (Japanese Iris). These handsome spring-blooming about the middle of April, and continue in bloom for five or six weeks. Many of the blooms have a diameter of from 8 to 12 inches, and are of various colors—white, purple, violet, mauve, magenta, variously marked and pencilled. They are invaluable in herbaceous clantings, are extremely hardy and easily cultivated. They do best in a rich, moist situation, and should receive an abundant supply of manure and water. With proper attention the Iris will give a wealth of bloom and color. We offer twelve of the best named sorts, 25 cents each, \$2.00 for 10, \$17.50 per 100. \$17.50 per 100.

HYDRANGEA ROSEA AND MONSTROSA

JASMINUM (Jasmine)

Jasminum Nudiflorum. NAKED-FLOWERED JASMINE. A graceful, healthy, climbing shrub, with dark green leaves. Flowers bright yellow, which are produced very early in January.

LAGERSTROEMIA INDICA

(Crape Myrtle)

100 Very bushy, 30 to 36 inches.....\$0.50 \$4.00 Strong plants, 18 to 24 inches......25 2.00 \$17.50

This old favorite is not sufficiently appreciated. The This old favorite is not sufficiently appreciated. The plant blooms throughout the entire summer, producing great masses of beautifully fringed flowers. A clump of these makes a most striking effect on the lawn. We offer two beautiful varieties.

Lagerstroemia Indica Alba. Pure white, a very strik-

ing variety.

L. Indica Rubra. Vivid crimson, flower heads of immense size.

LONICERA

(Bush, or Upright Honevsuckle)

			10	
Extra heavy	specimens, 4 yrs	\$0.50	\$4.00	\$30.00
Very heavy,	3 yrs., bushy	35	3.00	20.00
Strong, 2-yr.	plants	25	2.00	15.00

These plants are vigorous growers and free bloomers, and are of easy cultivation.

Lonicera Belgica. Belgian, DUTCH or MONTHLY FRAGRANT HONEYSUCKLE. Of climbing habit, but can easily be grown in bush form. Pink flowers; very profuse bloomer in early spring. In late summer again produces flowers, which continue until frost. One of our finest shrubs.

L Bolla. A hybrid variety, producing an abundance of pinkish-white flowers in early spring, followed by vellow fruit.

pinkish-white flowers in early spring, followed by yellow fruit.

Fragrantissima. FRAGRANT HONEYSUCKLE. Highly esteemed for its exceedingly sweet-scented, pinkish-white flowers; which appear in February and continue to bloom for a long time.

Morrowii. JAPANESE BUSH HONEYSUCKLE. A Japanese variety producing early in April a profusion of white flowers, followed by a mass of bright red fruit.

MANCHURIAN HONEYSUCKLE.

Ruprechtiana. MANCHURIAN HONEYSUCKLE. Flowers pure white. Blooms in March, and lasts six weeks; berries red or yellow. A very showy variety. L. Ruprechtiana.

PEONIES

Each								.\$0.25
10 .				 				. 2.00
								.17.50

Poonies-herbaceous. After experimenting for a number of years we have finally secured a selection of these beautiful plants, which are very hardy in this section. We offer 12 or 15 best sorts, double and single, white and several shades of pink, rose and red. Peonies do best in rich, deep, rather moist, loamy soil, and if plants are protected from the hot afternoon sun they will give excellent results. They should have a liberal supply of water at all times, especially when in bloom. Fertilize liberally with cow manure, as they are heavy feeders. Keep the ground well cultivated. If these few simple directions are carried out the result will be most satisfactory. carried out the result will be most satisfactory. Plant during fall.

HYDRANGEA PANICULATA GRANDIFLORA (See Page 20.)

PHILADELPHUS (Mock Orange)

Philadelphus Coronarius. GARLAND SYRINGA. With pure white, fragrant flowers.

P. Gordonii. White; large; blooms late.
P. Grandiflorus. Very large white flowers.
P. Laxus. Very large white flowers produced in clusters. Late bloomer, very fine variety.
P. Primulaeflorus. Flowers white; semi-double.

PEONIES

PRUNUS SINENSIS

(Dwarf Double-Flowering Almond)

Strong, grafted plants.....\$0.25 \$2.00 A beautiful small shrub, producing a quantity of small double flowers early in spring, before the leaves appear.

Prunus Sinensis alba plena. Double white flowers. P. Rubra piena. Double pink flowers.

PUNICA GRANATUM

(Pomegranate)

10 100 Each

These are among our most valuable summer flowering, tall growing shrubs, perfectly hardy South. Their flowers are produced in great profusion and make a conspicuous contrast with the dark glossy green foliage. Punica Granatum Alba. Double white Pomegranate P. Granatum Rubra. Double red Pomegranate; very

P. Granatum Variegata. Double variegated.

6	to 8	feet.	verv	bushv						10 \$7.50	100 \$60.00
4	to 5	feet,	very						50	4.00	30.00 15.00

Rhus Cotinus. PURPLE FRINGE, or SMOKE TREE. Greatly admired for its cloud-like masses of very deli-cate flowers, that cover the entire plant during the summer, appearing from a distance like clouds of smoke.

ROSMARINUS (Rosemary)

Rosmarinus Officinalis. This old favorite is very effective for a border, or for planting in clumps.

Note—Both sizes will be cut back to 6 inches to

facilitate transplanting.

SPIRAEA

SPRING BLOOMERS.

Spiraea Opulifolia Aurea. GOLDEN-LEAVED NINE BARK. A strong growing variety with golden-tinted leaves and white flowers.

Very conspicuous.

S. Prunifolia flore pleno. BRIDAL WREATH.
A beautiful early-blooming variety, with small double white flowers. Commences to bloom early in March.

S. Reevesiana (Reeves' Single Spiraea). Produces large clusters of single white flowers which cover the entire plant. A desirable early spring bloomer.

S. Reevesiana Flore Pleno. (S. Cantonensis Flore Pleno.) With large round clusters of double white flowers, which cover the entire plant. A most desirable early spring bloomer. Commences to bloom latter part of March, and continues for several weeks. One of the best.

One of the best.

S. Thunbergii. COMMON SNOW GARLAND.

A beautiful dwarf variety, with many slender branches, forming a dense bush. The leaves, in autumn assume brilliant shades of orange and scarlet. Profuse bloomer in early spring. Desirable for a low hedge.

15 to 18 inches, \$10.00 per 100.

S. Van Houttei. VAN HOUTTE'S SPIRAEA. A graceful shrub growing 6 to 8 feet in height. Produces a profusion of single white flowers during the latter part of March. Deservedly one of the most popular Spiraeas grown. (Note the picture.)

PERPETUAL BLOOMERS.

S. Anthony Waterer. CRIMSON SPIRAEA.
An improvement upon S. Bumaldii. A re-

markable free-flowering shrub, with upright branches. Attains a height of about three feet. Leaves bright green, with frequent variegations of yellow. If blooms are cut off as soon as they begin to fade, the plant will bloom throughout the entire season. Makes a beautiful low-growing hedge. 15 to 18 inches, \$10.00 per 100.

Billardii. A tall grower. Flowers bright pink, produced in long, dense panicles. Very showy and at-

S. Callosa Alba. Flowers white, of dwarf growth, a very neat and desirable variety.

S. Fortunei Macrophylla. A variety with very large leaves, which are tinted royal purple, making the plant very conspicuous. Very effective for a border, or far planting in grouns. or for planting in groups.

S. Froebeli. A fine, free-blooming sort. Flowers rose-

colored, in panicles.

SYMPHOROCARPUS RACEMOSUS

(Snowberry)

Symphorocarpus Racemosus (Snowberry). A graceful shrub growing 4 to 6 feet tall, slender drooping branches, flowers white, followed by clusters of white berries which remain upon the plant for many months. Very ornamental. 2-foot plants, stocky, 25 cents each, \$2.00 per 10.

SYRINGA (Lilac)

All grafted plants:

These are among our most valuable early spring-blooming shrubs; succeed best in strong soils. Com-mence blooming last of March. The following are all desirable and distinct sorts:

SINGLE LILACS.

Syringa Charles X. Dark, lilac-red.
S. Frau Dammann. A fine single white. Large panicles of flowers of medium size.
S. Gloria Rupella. Light red.
S. Japonica. JAPAN TREE LILAC. Flowers creamy white, in large panicles; late bloomer; becomes a good-sized tree.
S. Lovaniana. Light pink.
S. Ludwig Spath. Reddish purple. Best of its color.
S. Philemon. Purple.
S. Professor Stockhardt. Lavender; large trusses.

SPIRAEA VAN HOUTTEI

SVRINGA Continued DOUBLE LILACS

The new double varieties are especially desirable, both for their beautiful flowers and the length of their blooming period.

Syringa Alphonse Lavallee. Large panicles; blue, shad-

Syringa Alphonse Lavallee. Large panicles; blue, shaded violet.

S. Belle de Nancy. A brilliant satiny rose.

S. Chas. Joly. Very dark, reddish purple.

S. Comte de Jessieu. Best white yet introduced.

S. Comte Horace de Choiseul. Purplish-violet; large.

LAWN GRASS SEED

SPECIAL SOUTHERN EVERGREEN LAWN GRASS-FRIITTIAND MIXTURE

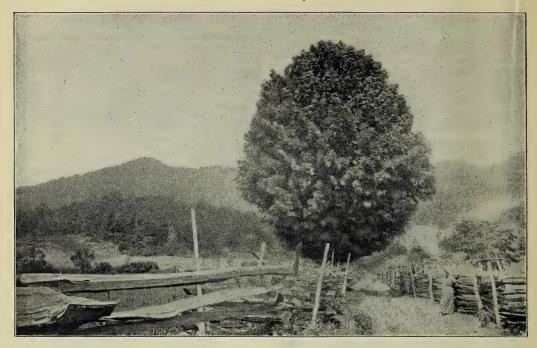

If You Want a Beautiful Lawn this Winter, Try Our Mixture.

After years of experimenting, we have succeeded in getting an Evergreen Lawn Grass Mixture which has given admirable results in the South. We have tried many different mixtures, but our FRUITLAND MIX-TURE will stand our hot summer sun better than any we have heretofore used.

Seed should be sown at the rate of 4 bushels (of 14 pounds each) to the acre.

Price, \$3.00 per bushel (of 14 lbs.) 10 bushels and upward, \$2.75 per bushel, packed, f.o.b. Augusta, Georgia.

No orders filled for less than 1 bushel.

SUGAR MAPLE

DECIDUOUS TREES

To meet the unprecedented demand for nursery-grown a position to supply in great quantities suitable trees for street and avenue planting. Special quotations on car-load lots will be given on application. All of our nursery-grown trees have been several times transplanted, therefore have a fine root system and transplant readily, whereas the forest-grown trees have a poor root system, and the loss in transplanting such trees is always very heavy. The initial cost of nursery-grown trees is very little more; why not get the best?

DIRECTIONS FOR PLANTING AND PRUNING—Before setting out, cut off the bruised or broken roots. Trees with branching heads should have the smaller branches cut out, and the larger branches cut back to within three or four buds of their base. When the tree has an abundance of roots and a small top of few branches, prune very sparingly, but when the roots are small and the top heavy, then prune the tree severely. Many persons plant large trees without pruning; this is often the cause of their failure to grow. Always dig the hole intended for the tree of ample size, so that when the young roots start out they will have soft ground in which to grow. The best fertilizer is well-rotted stable manure, thoroughly mixed with the soil. Plant about 2 inches deeper than the tree originally stood in the nursery row, using the top soil for filling in around the roots. See that every interstice around the roots is thoroughly filled, and that every root is brought into contact with the soil. When the hole is nearly filled, pour in a bucket of water so as to set the soil around the roots, then fill in the balance of the hole and press the dirt gently with the foot. When the tree is planted, mulch with 5 or 6 inches of well-decomposed stable manure; this should extend over the circumference of the hole; keep free from grass and weeds and loosen up the soil occasionally.

ACER (Maple)

Acer Dasycarpum. (Acer Saccharinum). SILVER, or WHITE MAPLE. A native species. One of the best and most desirable rapid-growing shade trees. Foliage bright green and silvery white beneath; attains a height of 50 to 60 feet. These trees should not be confused with the Silver Poplar or European Aspen, which throws up numerous shoots from the roots.

Each 10 100 12 to 14 ft., 21/2-inch caliper....\$1.50 \$10.00 \$90.00 8.00 60.00 $6.00 \\ 4.00$ 50.00 30.00 2.00 17.50

A. Dasycarpum Weirii. WEIR'S CUT-LEAF SILVER MAPLE. This is a beautiful form of the Silver Maple, leaves deeply cut and delicately divided, branches drooping, frequently touching the ground. Rapid grower, a very effective and popular variety. Height, 35 to 40 feet.

VIRGILIA LUTEA (Arrow Wood)

2 to 3 feet\$0.25 \$2.00

Virgilia Lutea. A medium size tree with spreading, somewhat pendulous branches, with a symmetrical round head. Leaves broad green, turning golden early in autumn. In early spring white flowers are produced in loose drooping panicles. A desirable lawn tree.

BROAD-LEAVED EVERGREEN TREES AND SHRUBS

Of many of the following named plants we can supply large specimens. Prices, sizes and descriptions will be given upon application. Our stock was never larger or hetter.

Most of the plants are grown in pots, thereby increasing safety in transplanting, and with less danger of loss from removal. Those marked "O. G." are taken from open ground, but lifted with balls of earth about the roots and wrapped in moss and excelsior. We must impress the necessity of defoliating nearly all Broadleaved Evergreens lifted from open ground before being forwarded. This will lessen the loss from transplanting, as many trees are lost if transplanted with all the leaves left on. After plants are set out in permanent positions, let the ground be covered with some mulching material, either leaves, coarse manure or straw. This will prevent too rapid evaporation, and greatly increase the growth.

ABELIA

A. Grandiflora. (Abelia Rupestris). One of the most satisfactory broad-leaved dwarf shrubs. Graceful drooping stems, and branches are covered with dark glossy leaves. In the winter assuming a metalic sheen. Produces an immense quantity of tubular-shaped white flowers, about an inch long, which are borne in clusters from last of May until frost.

Each
15 to 18 inches, strong, 4-inch pots.

Azalea Indica. HOME-GROWN INDIAN AZALEA. We have 50 varieties in our collection. The colors include pure white, all shades of crimson, scarlet, purclude pure white, all shades of crimson, scarlet, purple, salmon, and with exquisite variegations, mottlings, stripes, blotches, etc. Single and double flowers. We grow Azaleas in very large quantities, and annually add many of the new European varieties. All our plants are grown in open ground during summer and lifted in October, when they are in the most healthy condition. In this latitude it is best to plant Azaleas in open ground in March, but southward they can be safely planted from October until April.

Those beautiful shrubs are perfectly hardy in this latitude, but succeed best in a somewhat shady situation, and in a light soil containing an abundance of leaf-mold. They are of the greatest value for all purposes, either for massing or as single specimens in open open ground, or for the decoration of conservatories or rooms.

rooms

rooms.

If the plants are grown in pots, they should be repotted after flowering and before the new growth begins. Keep the plants sheltered for a few days and then plunge the pots in open ground in a shady situation, or they may be planted in an open border and kept shaded.

If plants are required for winter blooming in conservatory, they should be lifted and repotted before very cold weather and kept in a cool greenhouse. By judiciously selecting the varieties, a continuous supply of flowers may be had from January until May.

AZALEA-Continued.

Azaleas are liable to attacks of red spider and thrips, especially if plants are allowed to suffer from want of proper watering. Daily syringing of plants kept under glass will aid in eradicating these pests, and spray with sulpho-tobacco soap.

Potting soil should be comopsed of half peat, half leaf-mold and good loam; abundant drainage must be

leaf-mold and good loam; abundant drainage must be given.

The engraving, from photograph taken at Furitland, well shows the superb proportions to which Indian Azaleas may be grown in this latitude. It will be noted, too, that they cover themselves with flowers in the same prodigal fashion set by the diminutive bushes with which our more northern custemers are familiar. A well-fed, tended and pruned Azalea need never grow scraggy and mis-shapen with age, but skould become more beautiful every year, as its increasing spread of branches gives room for the display of myriads more of flowers. We believe that by following the hints given above, any of our southern customers may own specimens as fine as those illustrated. Those who grow Azaleas in the house should remember that the flowers will last much longer if the plants are kept in a cool room after they have expanded. kept in a cool room after they have expanded.

AZALEA INDICA (Imported)

P	lants with	crowns:						E	ach

CAMELLIA JAPONICA IMPORTED PLANTS

(White Varieties)

Do	uble	e W	Thite.	(C.	Alt	a	Plena	and	Ma	thotiana	
1.						_					10
										.\$2.00	
										. 1.50	
15	inc	ches	9.00	hrs	nch	60				1.00	

(Colored Varieties)

36 to 40 inches, very heavy plants with

buds 5.00	
28 to 30 inches, well branched 2.50	\$22.50
20 to 24 inches, well branched 1.50	12.50
18 to 20 inches, well branched 1.25	10.00
15 inches, well branched 1.00	8.00
These are bushy and shapely plants, but	without
flower-buds. The colors range in all shades	of red
from a very pale pink to darkest crimson, as	nd with
flowers combining exquisite variegations, per	ncilings,
mottlings, etc. Whilst we import a large qua-	ntity of
Camellias from the largest and most reliable E	uropean
growers, we cannot always guarantee that ever	ry plant
of the colored section will come true to label i	n every
instance, and we have to purchase and sell und	er those
conditions.	

NOTE—We can supply a few Camellias in colored varieties only, well set with buds. For these add 25 cents per plant to above prices.

CAMELLIA JAPONICA

HOME-GROWN PLANTS

						Each	10
18	to	24	inches.	slightly	branched	\$1.00	\$8.00
					branched		6.00

We offer a beautiful stock of Camellias of our own growing. We grow many thousands of Camellias, but, for years past, the demand has been so large that we baye to import largely in order to fill our orders. All the plants which we offer are propagated from speci-

PYRAMIDAL BOXWOOD-4 Feet High.

CAMELLIAS-Continued.

men plants, which are all grown in open ground, and are from 4 to 15 feet high. These consist of nearly one hundred varieties. Therefore, we have excellent opportunities for testing their relative merits. In the Home-grown section we offer no C. Alba Plena.

FOR OPEN GROUND-A partially shaded situation, FOR OPEN GROUND—A partially shaded situation, especially where protected from the cold winds of winter, is most desirable. Any good garden soil is suitable, but if mixed with leaf-mold better results may be expected. The best seasons for transplanting are from early October to beginning of November, and from end of February to end of March. Mulch the plants with well-retted manure. well-rotted manure.

FOR CONSERVATORIES—Use a potting compost of peat or leaf-mold and good loam, and give ample drainage. When in growth, they require an abundance of water and spraying of the foliage. When dormant, water sparingly and keep in cool temperature. Fire heat is not needed except during excessively cold weather, which would injure distending buds. Dropping of buds is caused by plants becoming too dry or by over-watering, or being kept under high temperature under glass. ture under glass.

 Solanum Jasminoides Grandiflora.
 POTATO VINE.

WISTARIA

Free-blooming and rapid-grower; flowers white; evergreen. Not hardy north of Augusta. An improvement upon the old variety.

VINCA (Periwinkle)

Vinca Major. PERIWINKLE, or TRAILING MYRTLE.

An old and favorite plant with large blue flowers produced in early spring; excellent for vases, rockwork and bordering slopes. Each 10 100 Strong clumps from open ground...\$0.25 \$1.50 \$10.00

V. Variegata. VARIEGATED PERIWINKLE, or TRAILING MYRTLE. Same as the above, except that the leaves are beautifully variegated with silvery white.

Each 10 100 From 3-inch pots.....\$0.25 \$2.00 \$15.00

WISTARIA

- Each 10 100 3 years, heavy, grafted \$0.50 \$4.00 \$30.00 2 year, grafted \$2.00 17.50
- Wistaria Chinensis. CHINESE PURPLE WISTARIA. A purple-flowering variety, fine.
- W. Chinensis Alba. CHINESE WHITE WISTARIA. A white-flowering variety; a beautiful, graceful climber.
- W. Chinensis Florepleno. DOUBLE PURPLE
 WISTARIA. A variety with very double
 purple flowers. Until the vine is 3 years
 old it is a shy bloomer, but afterward it
 becomes floriferous.
- W. Frutescens Magnifica. Own roots. Flowers in long tassels, pale blue; blooming later than the Chinese varieties, and also producing flowers during the summer; extremely vigorous.
- W. Multijuga. JAPANESE WISTARIA. A remarkably distinct and showy variety. Flowers light purple, in loose drooping racemes 1 to 3 feet long. Widely cultivated in Japan.
- m Japan.

 Wistaria. STANDARD or TREE FORM.

 These are specimens which have been trained to standard shape. The plants have stems from 3½ to 5 feet and have well formed heads. We offer a fine lot of plants of White, Purple, Double Purple and Multijuga at \$2.00 each.

ORNAMENTAL HEDGE PLANTS

Not Less Than 40 Plants Will Be Furnished at the Prices Quoted for 100, or 400 at the 1,000 Rates.

BERBERIS (Barberry)

Berberis Thunbergii. THUNBERG'S BARBERRY. A beautiful dwarf Barberry from Japan. Has small, bright green foliage, changing to coppery red in autumn. Retains its leaves for a long time. Makes a most beautiful and conspicuous low-growing hedge.

BUXUS (Boxwood)

Buxus Suffruticosa. (Dwarf Box). For edging. As with many plants that have graudally gone out of use, this plant is again becoming in great demand. We offer a nice lot of plants.

CERASUS

(Mock Orange of the South)

100 2-year, seedlings, 15 to 18 inches \$4.00 1-year, seedlings, 10 to 12 inches 2.00 \$15.00

Cerasus Caroliniana. (Prunus Caroliniana). MOCK ORANGE of the SOUTH. This well-known hardy evergreen makes a beautiful hedge. We offer a fine stock of young plants. 'the large plants are difficult to transplant, and it is desirable to cut back severely the young plants when transplanting. The plants should be set one foot apart, but if used for a screen they could be set 18 inches apart.

CITRUS (Hardy Orange)

1. year, 12 to 18 inches......\$3.00 \$15.00

Citrus Trifoliata. JAPAN HARDY ORANGE. TRIFO-LIATE ORANGE. This is the coming hedge plant for defensive as well as ornamental purposes, far more desirable than Osage Orange. It is hardy as far north as New Jersey, and if planted in good soil an impenetrable hedge can be had three years from planting. It is entirely free from insect depredations and fungous diseases. In early soring when covered with myriads of white flowers nothing is more attractive, and while not an evergreen, the vivid green wood makes it appear bright during the winter. Plants may be set one foot apart. Our hedges of this plant were the first planted in the United States, and make an impenetrable barrier for anything from a rabbit to an elephant.

HARDY ORANGE HEDGE, AT FRUITLAND,

CITRUS TRIFOLIATA-Continued.

Hedges of this plant require two or three annual shearings, the first about the middle of May and the others while the young growth is tender. If delayed until wood is hardened, it will require more time and increased labor. An excellent hedge knife can be made by taking a 28-inch scythe blade, straightening the shank and riveting it to a 14 or 18-inch straight wooden handle.

CYDONIA JAPONICA

Cydonia Japonica. (Pyrus Japonica): JAPAN QUINCE, or FIRE BUSH. This is a very desirable hedge plant where a blooming hedge is desired.

 Strong plants, 3½ to 4 feet, well branched

LIGUSTRUM (Privet)

Ligustrum Amurense (Amoor River Privet). The true variety. This far surpasses any other evergreen privet. It does well in many sections of the North and East. For the South it is far superior to the California Privet which loses its leaves during winter, whereas the Amoor River Privet retains its bright colored foliage

Amoor River Privet retains its bright colored foliage

SPIRAEA THUNBERGII

throughout the entire year. Since 1866 we have cultivated and disseminated millions of the Amoor River Privet and it is without doubt the most popular evergreen hedge plant of the day. It is of rapid growth, adapts itself to almost any soil not too arid or extremely wet. If properly treated a hedge may be secured in two years after planting. Set the plants 12 inches apart and after setting, cut them back to within 3 or 4 inches of the ground. In the spring after the plants have made a growth of 8 or 10 inches, cut off half of this growth. Proceed in a like manner with each succeeding growth until the hedge has attained the desired height and width.

Well branched, transplanted plants, 24 to 30 inches \$5.00 \$40.00

Note—To save freight, we always cut back Amoor River Privet before shipping, unless instructed to the contrary. This also avoids any possibility of the plants heating should there be any delay in transit.

L. Ovalifolium. CALIFORNIA PRIVET. This is a very popular variety for hedges North and West. Leaves larger and growth more erect than L. Amurense.

ROSE MARIE PAVIE (Polyantha)

Per 100 2 years, 24 to 30 ins., very heavy...\$15.00 1-year, 12 to 15 ins., heavy...... 10.00

Rose Marie Pavie. This makes a very ornamental hedge of low growth. Well adapted for cemetery lots, as it is in constant bloom from early spring until frost. May be planted 2 feet apart. Pale rose changing to white; flowers 1 inch in diameter. Of all the Polyanthas this is the most desirable for hedges, as it is hardy in the northern states.

SPIRAEA

Spiraea Thunbergii. THUNSBERG'S SPIR-AEA. Of awarf habit; branches slender and drooping; foliage very narrow, light green, changing to bright orange and red in fall; flowers small, white, which appear very early in March and last three weeks. A beautiful variety for a warf or low-growing hedge.

15 to 18 inches. \$10.00

ORNAMENTAL GRASSES

ALL HARDY IN THIS LATITUDE.

These are very effective for bedding purposes. All are exceedingly graceful and have large, plumy heads. When planted in masses or groups their great value is brought out.

PAMPAS: GRASS

CONIFEROUS EVERGREENS

We can justly claim that we grow the largest and most varied stock of Coniferous Evergreens in the Southern States, and especially of those varieties as are best adapted to this climate. We also grow many of the hardy varieties which are adapted to the East and West. Our collection of Biotas, Cupressinae, Junipers, etc., contains many valuable and rare sorts. All of our open ground conifers have been several times transplanted. Others are grown in open ground, lifted in early fall and potted, thus having a beautiful root system. All plants are shipped with a ball of earth around the roots, same wrapped in burlaps and moss. The best seasons

GROUP OF CONIFEROUS EVERGREENS PLANTED BY US IN WINTER 1905

CONIFEROUS EVERGREENS-Continued.

for transplanting are from November to December and from February to March. In the lower sections planting can be successfully done any time during the winter.

We can supply fine specimen plants of many varieties at from \$5.00 to \$25.00 each, according to size. We will supply 10 fine plants, distinct varieties, our selection, 12 to 24 inches, \$4.00; or, 100 fine plants, in 25 or 30 varieties, our selection, \$25.00.

ABIES (Fir)
Abies Frazerii. FRAZER'S BALSAM FIR. (She Balsam of the Southern Alleghany Mountains). Of erect pyramidal growth; foliage dark, shining green. Thrives best in the upper sections of the South.
Each 10 2 to 2½ feet, \$1.00 \$8.00 18 to 24 inches 50 4,00 A. Pectinata. EUROPEAN SILVER FIR. A tall-grow-
ing tree; leaves dark green above, silvery beneath. A valuable and handsome variety. Each 10 to 12 inches, pot-grown\$0.50

BIOTA AUREA NANA. BERCKMANS' GOLD-
EN ARBORVITAE. The most popular of all
Biotas. A new variety which originated in
our grounds. Of very dwarf and com-
pact habit; a perfect gem for small
gardens or cemetery lots. It far sur-
passes the old Biota Aurea where a very
dwarf tree is desired. This plant is very effec-
tive for window-boxes and for tubs in ex-
posed places, where it is too cold for palms
and other decorative plants. Has stood a
temperature of 10 degrees below zero at New
York. Consequently, it is the hardiest of its
class. Each 10 100

RETINISPORA OBTUSA NANA

SUB-TROPICAL DIVISION

FRUIT-BEARING AND ECONOMIC SUB-TROPICAL TREES AND PLANTS

The exportation of our nursery products to Cuba, Porto Rico, the West Indies, South America, Mexico and other foreign countries has increased so rapidly during the past few years that we are warranted in saying that they are well adapted to those sections and have given satisfaction. We include in this division such fruit trees and plants as are grown especially for tropical and subtropical countries. The periods of maturity vary trees and plants as are grown espe more or less according to localities.

ACACIA FARNESIANA (Popinac)

18 to 24 inches, from 3 and 4 in. pots...\$0.25 \$2.00 A well-known and popular plant. Branches thorny; foliage with minute leaflets; flowers in round yellow balls; very fragrant. A profuse bloomer. \$2.00

.35 2.50 20.00

We have a large stock of pot-grown plants, which can be shipped and transplanted at any time. Plants grown in open ground do not transplant readily. This tree is perfectly hardy at Augusta, and does well along the South Atlantic and Gulf Coasts. It is a handsome evergreen, with bright, shiny leaves. Will do well on poor soil, but will make a more satisfactory growth when properly fertilized. It is being planted in large quantities for producing the gum campaor of commerce.

CITRUS FRUITS

(ORANGES, KINKANS, LEMONS, ETC.)

After many years' test, we can unhesitatingly recommend Citrus Fruits budded upon Citrus Trifoliata (Hardy Orange), this stock being particularly desirable for the colder sections of the Orange belt, and all varieties of Citrus budded upon it will stand more frost than when budded upon any other stock. Varieties budded on it bear at an early age, and trees grow off as rapidly as those budded upon sour orange or rough lemon stocks, when planted in open ground. The fruit also ripens earlier than the same variety grown on other stocks. These plants are most desirable for growing in tubs in greenhouses and conservatories. The increasing demand for our plants speaks for itself. All plants are shipped with a ball of earth about the roots. For distant shipments the growth of the plant is not checked.

POMELO, or GRAPE FRUIT

In the past few years this has become a most popular and fashinoable fruit. Peel is smooth and thin, flesh juicy and free from bitterness. Same sizes and prices as oranges. Triumph.

GREENHOUSE DEPARTMENT

Each 10

The increasing demand for hardy ornamental shrubs, plants, etc., in the past few years has forced us to discontinue the growing of a general line of greenhouse and bedding plants, such as geraniums, heliotropes, coleus, etc., and the space heretofore devoted to these plants in our greenhouse is now used for producing plants such as Azaleas, Camellias, Palms, Citrus Fruits, etc. in large quantities. We offer herewith a small collection of greenhouse plants, but these will be found to be of superior quality.

MEVENIA ERECTA

10 \$2.00

Meyenia Erecta Alba. A large shrub. Flowers large white, with yellow throat. Almost a perpetual bloomer. In middle Florida this plant is perfectly hardy, and attains a height of 10 to 20 feet. A most beau-

tiful plant.

M. Erecta Cerulea. Of same habit as M. Erecta Alba, but with flowers of intense violet, with rich orange

TABERNAMONTANA CAMASSA

(Crape Jasmine)

Tabernamontana Camassa. An evergreen shrub of dwarf habit, flowers resembling the Jasmine. White; very frangrant, and blooms during a long period. Strong plants, from 3-inch pots......\$0.25 \$4.00

TECOMA CAPENSIS (Climber)

Strong plants, from 3-inch pots......\$0.25 \$2.00

Tecoma Capensis. Flowers bright red; blooms contin-ually during the summer. A beautiful plant. Hardy south of Savannah.

PALMS

During winter our Palm houses are kept under as low a temperature as is consistent with the health of the plants, and the largest part of our stock is carried through the summer in slat houses, where they have free circulation of air and a clean and healthy growth, becoming thoroughly hardened off by fall. Our plants can, therefore, stand distant carriage without injury, and will not suffer from the sudden change when removed from a high greenhouse temperature to that of a sitting room.

All our Palms, being grown in pots, can be forwarded during the whole year. Measure is from top of pot to top of plant, in its natural position.

We would state that as all varieties do not grow alike we cannot quote plants of equal height at the same price. Some are of rapid growth, others affect a dwarf habit. Young plants of such varieties as Phoenix, Seaforthia and a few others, do not show their characteristic forms of foliage until-the second year. The lowest prices refer to 2-year-old plants, ranging from 10 to 12 inches, according to variety.

CULTURAL DIRECTIONS—Use a compost of equal parts of leaf-mold rich garden soil and well-decayed cow-dung and some bone meal. Give drainage and keep plants in open air, but in partial shade during summer. Water regularly during summer. Keep soil only moist during winter and foliage free from dust. Repot large plants in February and smaller ones twice during summer. The varieties marked with an asterisk (*) are the most hardy and suitable for open ground in Middle Florida; the others are for the conservators and tropical countries.

ARECA

Areca Lutescens. One of the most beautiful and valuable Palms. Foliage graceful bright green, with rich golden stems.

12 to 15 inches, 2 to 3 characterized leaves, 4-inch pots	.35	3.00

The most popular of all the fan-leaved Palms. Very desirable for all decorative purposes.

PANDANUS (Screw Pine)

Among the foliage plants for home decoration, and especially for use for fern-pans and table ornaments, none are more desirable than Pandanus. They are easily managed and thrive best in a soil composed partly of good loam and old cow manure. Water freely during summer, but keep plants moderately moist only during winter, as too much water at that season, and when plants are dormant, will cause them to decay. They should be kept under high temperature during winter.

Pandanus Ultilis. With spiny, recurved green leaves, which assume a screw-like character. This is the most valuable for general purposes, either for vases or specimen plants.

Our Popular Special Collection of Palms

These special collections are of good value and have never yet failed to please the purchaser. We will supply the following collections of Palms, selection to be left with us.

Those unfamiliar with Palms will do well to allow us to select for them, as our experience enables us to send out plants which will be most hardy and effective, and show the greatest distinction in any location.

PHOENIX RECLINATA

ROSES

FOR OPEN-GROUND CULTIVATION.

In the ornamental line strong field-grown roses claim our best attention. We annually test the adapta-bility of the majority of the new sorts to Southern conditions, and those which we offer are of the greatest merit

Owing to our climatic conditions and soil being especially adapted to roses, our one-year field-grown plants

DIRECTIONS FOR PLANTING, PRUNING AND FERTILIZING.

Any good garden soil is suitable, but should be well fertilized with decomposed stable manure. Keep the soil free from weeds and stir frequently during the summer. Mulching in fall with stable manure is beneficial. A small amount of bone meal or good fertilizer applied in summer is advisable.

WHEN PLANTING, cut off all but two or three of the strongest branches; cut these back to 3 inches. Plants thus cut back will transplant better and produce finer flowers.

PRUNING. After the first killing frost, most of the varieties should have two-thirds of the past year's growth cut off. As a general rule, the more vigorous the variety the less it should be pruned. Remove all decayed wood. Climbing Roses should have only their side branches shortened in; do not disturb the main stem. WE FREQUENTLY receive complaints from our patrons who order late in the spring; they state the flowers produced on their roses are very inferior and do not come up to description. We would state that perfect flowers cannot be expected from plants set out late in February or March, and which produce blooms before tney are well established. But if these plants are allowed to grow until the following fall, and if they receive the proper treatment, there will be no cause for complaint.

INSECTS. For aphis, thrips and other insects infesting Roses, spray plants with a solution of sulphotobacco soap.

soan

FOR ROSE-SLUG, spray with hellebore or insect powder. For rose-leaf hopper, spray with insect powder, tobacco decoction or kerosene emulsion.

MILDEW. This is caused by extremes of heat and cold, or by a continuance of damp, cold weather. Sprinkle the plants with water and dust them with sulphur or soot, or spray with Bordeaux mixture.

Mme. Francisca Krüger. (T.) A fine rose; coppery-yellow, shaded with peach.

Mme. Lombard. (T.) Bright rose; large; full; fragrant.

Mme. Margottin. (T.) White, lemon-yellow center.

Mme. Plantier. (H.N.) Pure white; medium size.

Profuse bloomer in early spring only. Desirable for massing.

Paul Neyron. (H.P.) Deep rose; immense size; extra-

fine.

Rugosa alba. (R.) Single white flower. The Rugosa roses are especially desirable for massing. Flowers nearly all summer. The foliage is a bright glossy green. During autumn and winter the plant is covered with brilliant red seed pods.

Rugosa ruba. (R.) Same as Rugosa alba except that flowers are single crimson.

Souv. de Catherine Guillot. (T.) Coppery carmine center, shaded with orange. Very fine.

Vick s Caprice. (H. P.) Light clear pink, stiped white and carmine.

Vicomtesse de Wautier. (T.) Bright rose, tinted darker, dark rose center; free bloomer.

White Maman Cochet. (T.) Pure white, sometimes tinged blush. A superb rose.

Yellow Cochet. (T.) A form of Maman Cochet, with light yellow flowers. An extra fine sort.

CLIMBING ROSES—Own Roots.

Banksia White. Flowers somewhat smaller than B. anksia white. Flowers somewhat smaller than B. Fortunci, produced in immense quantities in small clusters. Strong-growing climber. herokee. The well-known single white, spring blooming variety of the South. Foliage bright glossy

Cherokee.

ROSES-Continued.

Clothiae Soupert, Climbing. (P.) This variety originated in our nurseries. We have cultivated it for ten pears and can recommend it with the utmost confidence. In color and form it is similar to its parent, the well-known Clothilde Soupert, but flowers are larger. A constant bloomer after the first year, as it flowers best on old wood. Vigorous grower, and has resisted a cold of 20 degrees below zero. This is a great addition to our list of Climbing Roses, and is becoming one of the favorites.

Crimson-Rambler. A vigorous-growing climbing Rose, producing a profusion of small crimson flowers in trusses. It is a most showy plant while in bloom, during April and May.

Dorothy Ferkins. This is said to be a hybrid of Wichuriana and Madame Gabriel Luizet. It is a vigorous and rampant climber. The foliage is of a deep green, leathery texture, and remains on the plant nearly all

leathery texture, and remains on the plant nearly all

winter. The flowers are from 1 to 1½ inches in diameter, borne in clusters of from 10 to 30, and very double, of a beautiful shell-pink color. Remains in bloom for several weeks. A most desirable new climbing Rose. Most effective for planting on terraces and slopes.

Each 10 100
Strong, field-grown plants.....\$0.25 \$2.00 \$15.00

Lamarque. (N.) Pure white, fine old climber.

Marie Guillot. (T.) White, slightly large, well-shaped. A fine climber. slightly tinted lemon;

Philadelphia. (Rambler.) This variety is a cross between Crimson Rambler and the hybrid perpetual Victor Hugo. Its color is deeper, brighter and more intense crimson; flowers larger and growth more erect than Crimson Rambler.

Wichuriana. (The Memorial Rose.) Almost evergreen; flowers small, single white; of trailing habit. Beautiful for planting on slopes and terraces, which it soon covers with a mass of bright green foliage.

ROSES BUDDED UPON MANETTI STOCK

1-yr. plants, budded low, 35c eacn; \$3.00 for 10; when selection is left to us, \$12.50 for 50; \$25.00 for 100. 2-yr. plants, strong, extra heavy, of most of the following varieties at 50c each; \$4.00 for 10.

Some varieties of Roses are almost impossible to propagate upon their own roots, and unless these are upon Manetti their cultivation would have to be discontinued. Others produce finer flowers when budded rafted upon the Manetti stock. They are especially desirable for Florida and warm climates, as their roots

grown upon Manetti their cultivation would have to be discontinued. Others produce finer flowers when budded or grafted upon the Manetti stock. They are especially desirable for Florida and warm climates, as their roots penetrate the soil to a great depth.

Budded Roses should be planted sufficiently deep so that the junction of the bud with the stock is from 2 to 3 inches below the surface of the earth. Do not overlook this.

The budded Roses should be carefully watched, and all suckers or shoots which grow out from below the place where the bud is inserted must be removed. If this is neglected, the stock will outgrow the bud and failure will surely follow.

The foliage of the Manetti is composed of from seven to nine leaflets, whereas Tea, Hybrid and Bourbon Roses usually have but five.

BOURBON, HYBRID PERPETUAL, HYBRID TEA and TEA ROSES-BUDDED.

(H.P.) Deep rose; large; cupped;

American Beauty. (H.P.) Deep rose; large; cupped; fragrant; dwarf grower.

Anna de Diesbach. (H.P.) Clear carmine-pink; very large; free bloomer.

Baroness Rothschild. (H. pink. A beautiful Rose. (H.P.) Large; cupped; clear

Bessie Brown. (H.T.) A vigorous upright grower; flowers of good form, large size, creamy white, very fragrant. A free bloomer. A new variety of great

Boule de Neige. (Ball of Snow.) (H. P.) Pure white, medium size, fine form and very free bloomer.

Bride. (T.) Variable; white tinged blush and at times silvery rose; a fine flower, but not constant.

Capt. Christy. (H.T.) Blush, r sv center; large and full; very free bloomer.

Clio. (H.P.) Flesh, center shaded pink; large; globular;

vigorous grower.
. Henon. (H.P.) Pure white; thornless; dwarf

Dr. Henon.

Etoile de Lyon. (T.) Rich golden yellow; vigorous;

free bloomer.

Fisher Holmes. (H.P.) An improved General Jacqueminot. Large; full; brilliant crimson-scarlet. An excellent Rose.

ran Karl Druschki. (H.P.) Flowers very large, snow-white; strong grower and free bloomer. A new Ger-man Rose that has made quite a sensation, and has also been called the White American Beauty. A magnificent rose

General Jacqueminot. (H.P.) Fiery red; very fragrant; free bloomer.
Glory of Brussels. (Gloire de l'Exposition de Bruxelles.) (H.P.) Very large, fine form; deep amaranth

purple; free bloomer and vigorous; one of the best

purple; free bloomer and vigorous; one of the best new dark roses.

Gruss an Teplitz. (H.T.) Bright crimson; very fuil; free bloomer; excellent.

Kaiserin Augusta Victoria. (H.T.) Creamy-white; very double; buds large and pointed. Decidedely the best White Tea grown.

Killarney. (H.T.) A new Irish Rose, of a brilliant, silvery pink. Flowers large; pointed buds; free bloomer and strong grower. Although quite new, it has taken a prominent place amongst our popular sorts.

sorts.

La France. (H.T.) One of the best-known Roses. Silvery peach; excellent; weak grower.

Louis van Houtte. (H.P.) Dark crimson, shaded with maroon. Very fine.

Margaret Dickson. (H.P.) A fine rose. Vigorous grower; flower white, tinted flesh near the center.

Meteor. (T.) Dark, velvety crimson. Vigorous grower and profuse bloomer.

Mme. Caroline Testout. (H.T.) One of the best of the newer Roses. Of LaFrance type, but clear pink; large; free bloomer. A great favorite where known.

Mrs. John Laing. (H.P.) Soft pink; large; good form; fragrant; free bloomer.

Marshall P. Wilder. (H.P.) Cherry-carmine; free bloomer. Fine.

fragrant; free bloomer.

Marshall P. Wilder. (H.P.) Cherry-carmine; free bloomer. Fine.

Papa Gontier. (T.) Brilliant carmine, tinted rose; finely formed buds.

Prince Camille de Rohan. (H.P.) Rich dark maroon.

Very fine. Ulrich Brunner. (H.P.) Cherry-red; very large; fine

wassily Chludoff. (T.) Carmine, changing to rose; a very strong grower and free bloomer.

CLIMBING NOISETTE and CLIMBING TEA ROSES—BUDDED.

Chromatella. (N.) Deep yellow. An old and favorite

Devoniensis, Climbing. (T.) White, flesh center. Ex-

cellent.
Elie de Beauvillain. (T.) Soft rose, Salmon center;

Elie de Beauvillain. (T.) Soft rose, Salmon center; vigorous grower; very good.

Kaiserin Augusta Victoria, Climbing. (T.) (Mrs. Robert Peary). Similar to the bush form. Vigorous; fine white climber.

Marie Guillot. (T.) White, slightly tinted lemon; large; well-shaped. A fine climber.

Marechal Neil. (T.) Deep chrome-yellow. Always deeper in color and a better grower when budded. This is the most desirable of all the yellow Roses.

Meteor, Climbing. H.T.) Dark, velvety crimson. Vigorous grower and profuse bloomer.

Perle des Jardins. (T.) Bright yellow, very full and double. Best of its color.

Pillar of Gold. (T.) Rosy pink, base of petals yellow. Variable in color. Sometimes almost solid pink. Free bloomer, rapid grower.

Reine Marie Henriette. (T.) Bright cherry-red. Of good form and vigorous in habit. The best red climber. Reve d'Or (Climbing Safrano). (T.) Chamois-yellow; large; full; fragrant; free bloomer. An extra fine timbing. Rose.

climbing Rose.
Waltham No. 3. (H.P.) Very fine spring and autumn-blooming climber; dark crimson.
Wm. Allen Richardson. (T.) Orange yellow, center

coppery yellow. ooten. (H.P.) Bright magenta red, richly shaded crimson, very double and fine climber.
